A CRM APPLICATION FOR THECHAISHOP&CO;

SALESFORCE CRM – FINAL PROJECT REPORT

Project Documentation, Implementation, Configuration & Testing

DEVELOPED BY	SUBMITTED BY
Archana. A	Archana. A

Project Overview

The project “A CRM Application for TheChaiShop&Co;” focuses on developing a Salesforce-based Customer Relationship Management system to manage customer, employer and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports and improves customer engagement through automated notifications.

Project Objectives

- Streamline customer relationship management.
- Automate billing and order calculations.
- Improve data accuracy through validation.
- Enable data-driven decision-making using reports and dashboards.
- Enhance customer engagement through email automation.

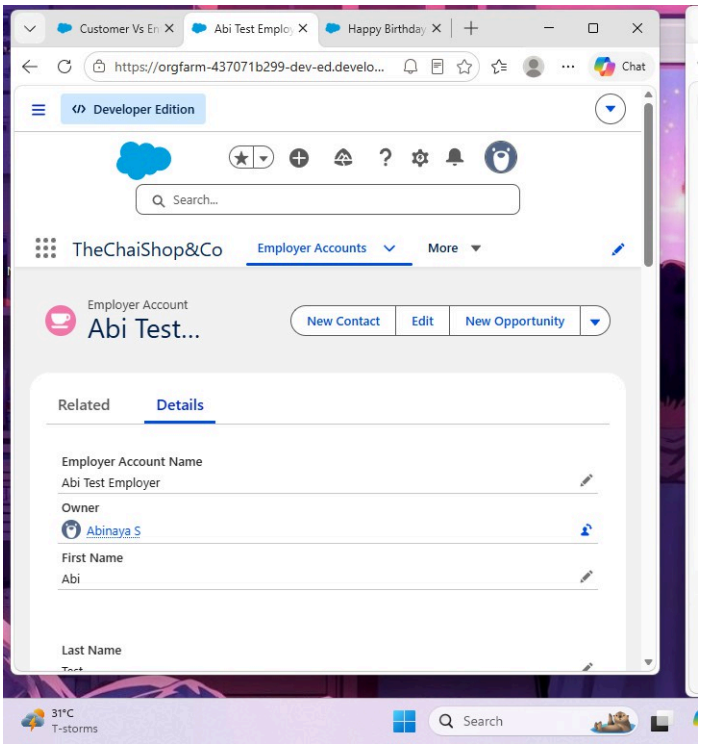

Figure 1. Salesforce project environment evidence.

2. User Story, Purpose & Scope

User Story

As a sales representative at TheChaiShop&Co;, I want to efficiently manage customer relationships and streamline sales processes using our CRM application. I want to access and update employer details, distinguish online and offline customer records using record types, automate order quantity and total-bill calculations, generate insightful reports and dashboards, and automate birthday email notifications for special offers.

Purpose

The purpose of the CRM is to centralize customer, employer and enterprise information while reducing manual work. The system combines structured data, automation and analytics in a single Salesforce environment.

Project Scope

- Customer, Employer and Enterprise Account management.
- Online and Walk-In order record types.
- Validation rules for important customer and employer information.
- Automated order quantity and total-bill calculations.
- Birthday Offer Email automation.
- Sales reports and Customer Vs Enterprise dashboard.

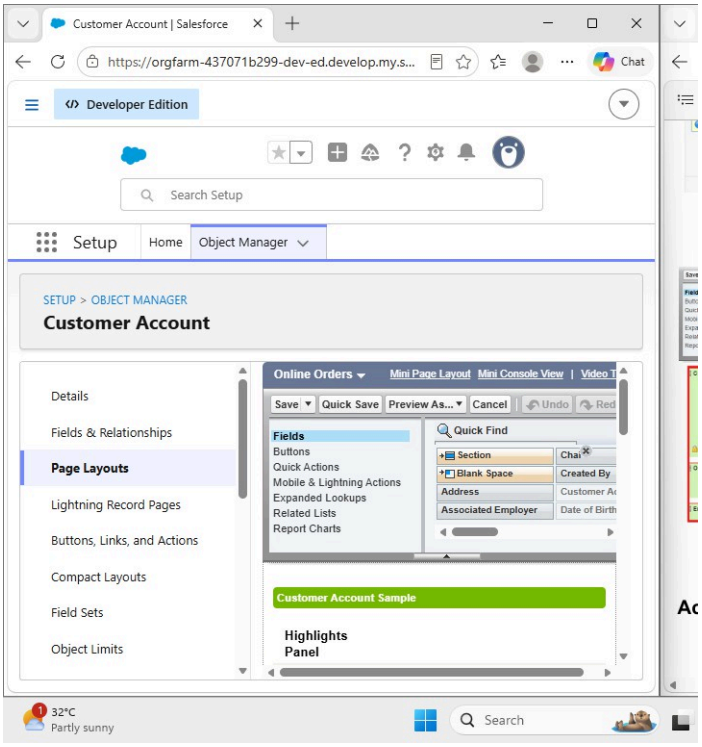

Figure 2. Salesforce configuration evidence.

3. Problem Statement & Ideation

Manual CRM operations can make customer information, order calculations and sales reporting difficult to manage consistently. The project addresses the need for centralized information, accurate calculations, timely reporting and automated customer engagement.

Empathy / User Needs

- Target users: Sales Representatives, Managers, System Administrators and Business Analysts.
- Need: Accurate customer data, fast reports and simple navigation.
- Pain points: Manual entry, errors, delays and data loss.
- Expected gains: Automation, faster reporting and centralized information.

Brainstorming & Selected Idea

The source documentation considers manual CRM, Excel-based management, web-based CRM, Salesforce-based CRM and automated email systems. The selected idea is a Salesforce-based CRM application combining structured data management, automation and analytics for TheChaiShop&Co.;

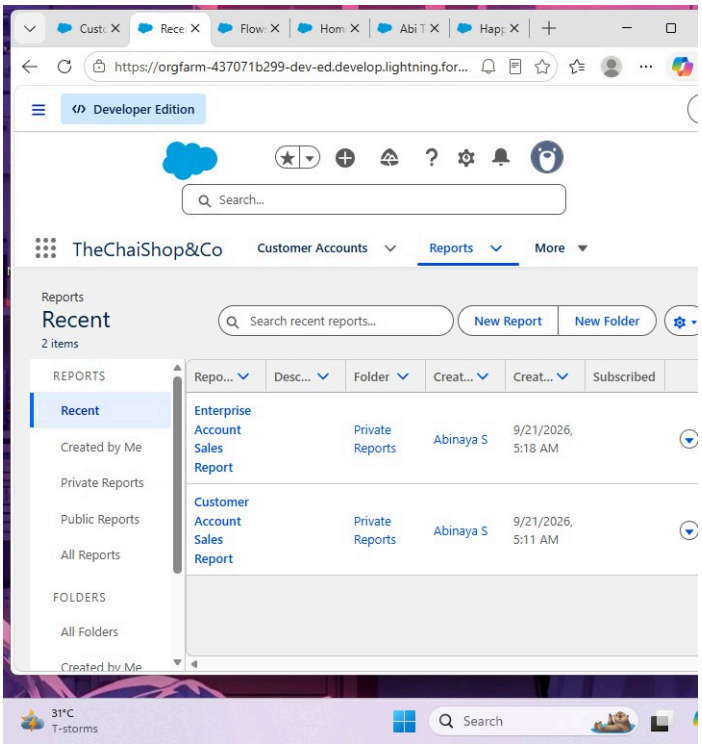

Figure 3. Salesforce report/application evidence.

4. Requirements & Solution Architecture

Functional Requirements

- User Login
- Object Creation
- Data Entry
- Billing Automation
- Report Generation
- Email Automation

Non-Functional Requirements

- Usability – simple navigation, clear forms and user-friendly dashboards.
- Security – secure authentication, role-based access and protected data.
- Reliability – accurate storage, backup/recovery and error handling.
- Performance – quick page loading and dashboard/report rendering.
- Availability – cloud-based access with minimal downtime.
- Scalability – support for increasing users and customer data.

Solution Architecture

- Presentation Layer – Salesforce Lightning UI.
- Application Layer – Flows and Logic.
- Data Layer – Custom Objects.
- Analytics Layer – Reports and Dashboards.

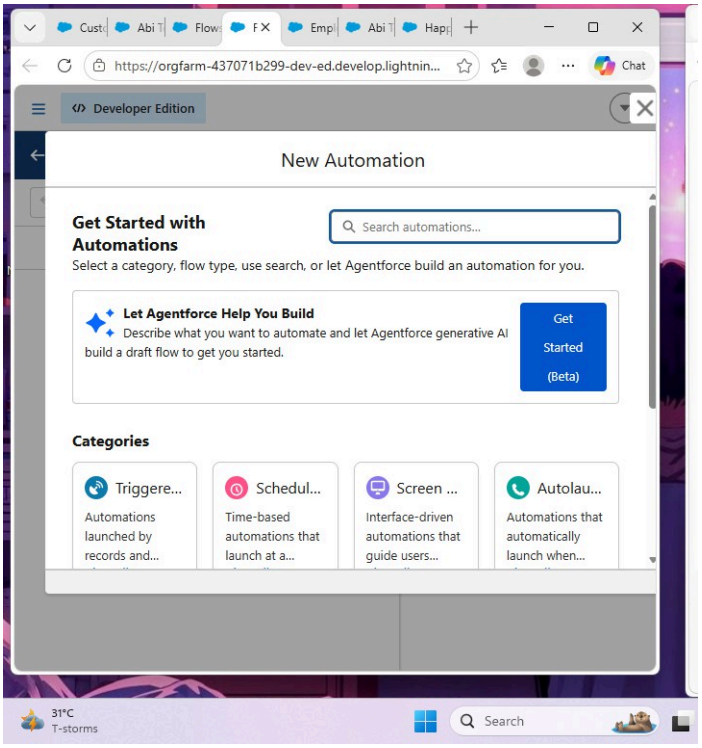

Figure 4. Salesforce automation configuration evidence.

5. Technology Stack & Implementation Plan

Technology Stack

- Frontend – Salesforce Lightning.
- Cloud/Data – Salesforce Cloud.
- Automation – Salesforce Flows.
- Platform – Salesforce Platform.
- Analytics – Reports & Dashboards.

Major Implementation Milestones

- Developer Account → Object Creation → Tabs → Lightning App.
- Global Picklists → Fields & Relationships → Page Layouts.
- Record Types → Validation Rules → Email Templates.
- Email Alerts → Flows → Reports & Dashboards.

Core Modules

- Employer Account, Customer Account and Enterprise Account.
- Online Orders and Walk-In Orders.
- Birthday Offer Email automation.
- Customer Account Sales Report and Enterprise Account Sales Report.
- Customer Vs Enterprise Sales dashboard.

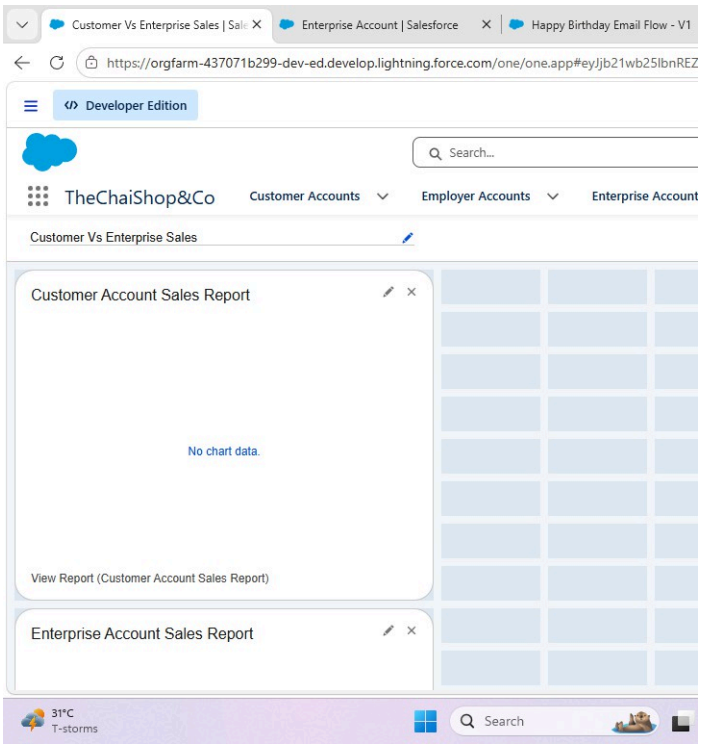

Figure 5. Reports and dashboard implementation evidence.

01. Developer Environment & Salesforce Setup

The project begins with a Salesforce Developer environment that provides the workspace for creating the custom CRM configuration. The implementation evidence records the progression from setup into the application configuration.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

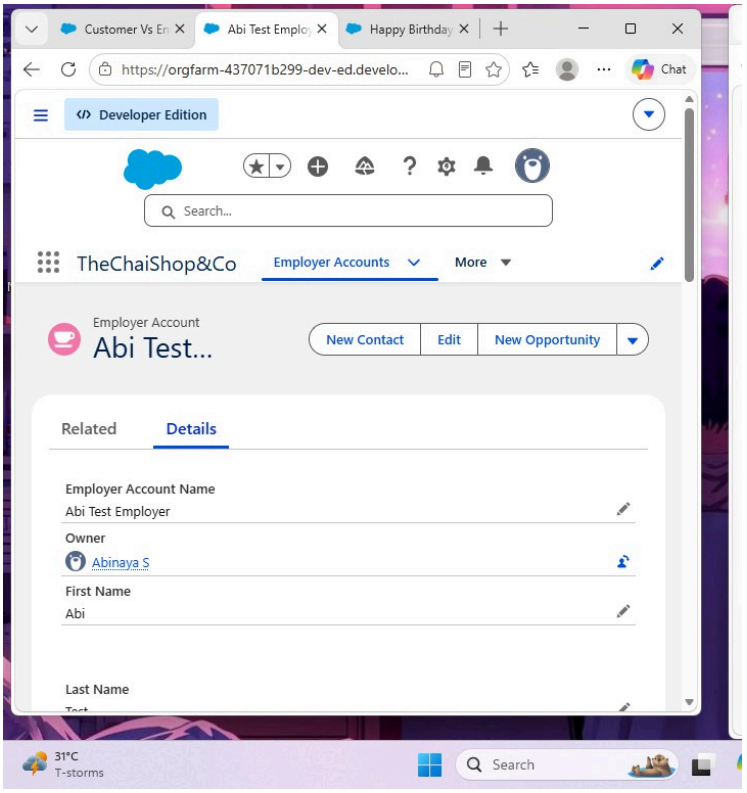

Figure 1. Developer Environment & Salesforce Setup – Salesforce implementation evidence.

02. Object Creation – Employer Account

The Employer Account object is used to store employer information such as name, contact details, designation, salary and identification details. This object supports structured employer management within the CRM.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

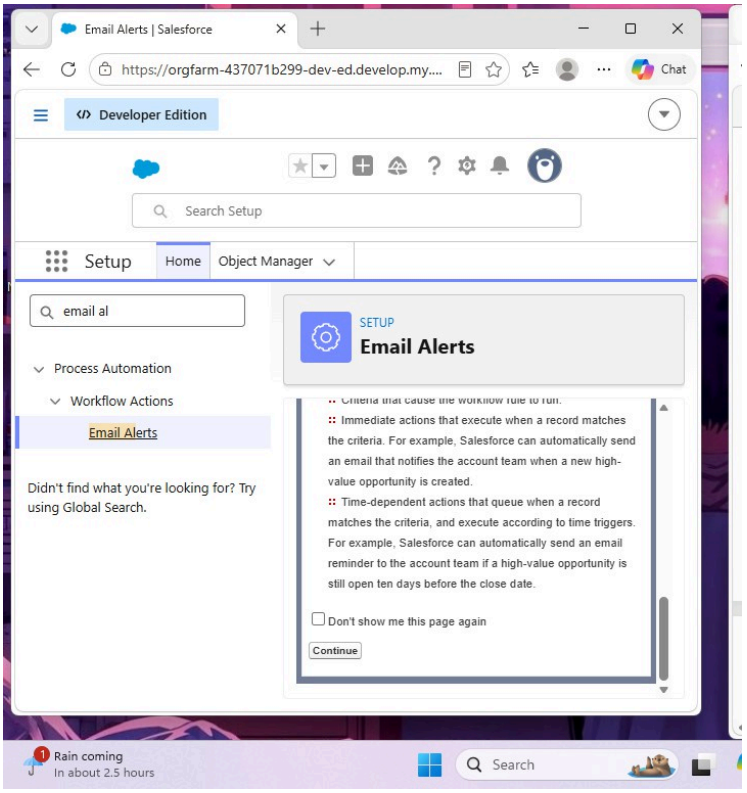

Figure 2. Object Creation – Employer Account – Salesforce implementation evidence.

03. Object Creation – Customer Account

Customer Account is the central object for customer order and relationship information. It stores personal details, contact information, order-related fields and relationships to employers.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

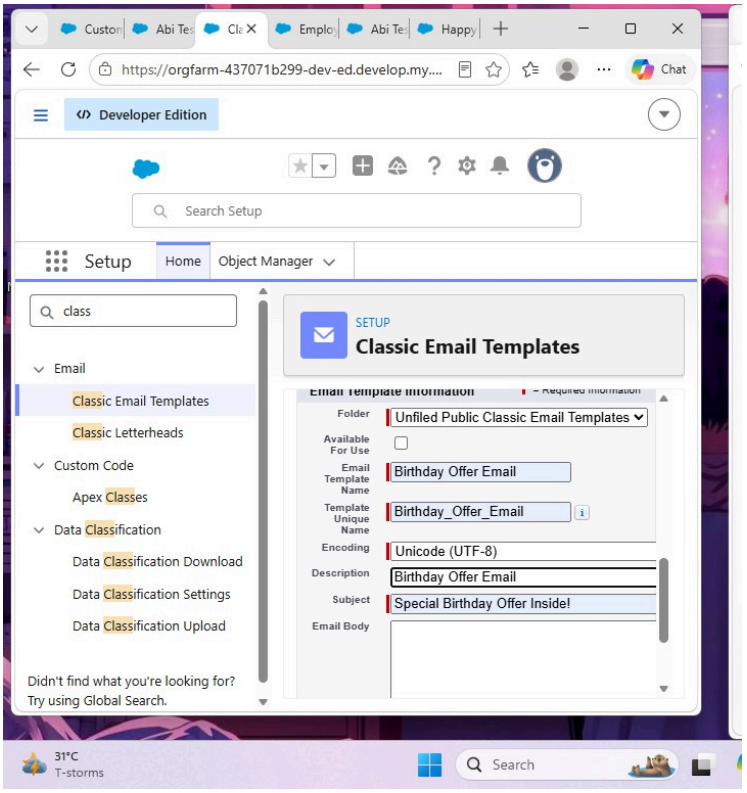

Figure 3. Object Creation – Customer Account – Salesforce implementation evidence.

04. Object Creation – Enterprise Account

Enterprise Account stores business customer information such as enterprise name, contact information, order information and associated employer details.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

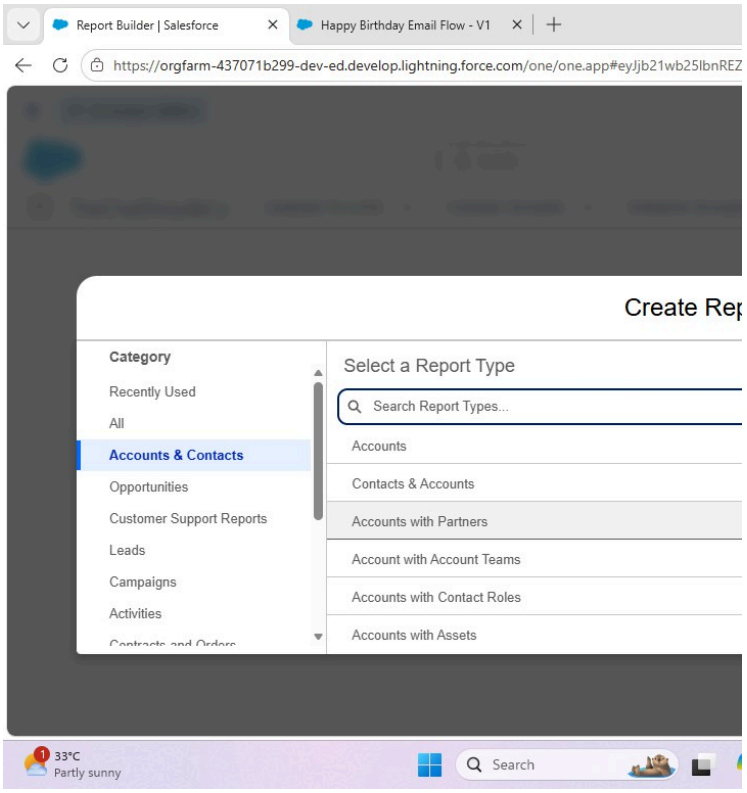

Figure 4. Object Creation – Enterprise Account – Salesforce implementation evidence.

05. Custom Tabs

Separate tabs for Employer Accounts, Customer Accounts and Enterprise Accounts make the application easier to navigate and allow users to work with each business record category independently.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

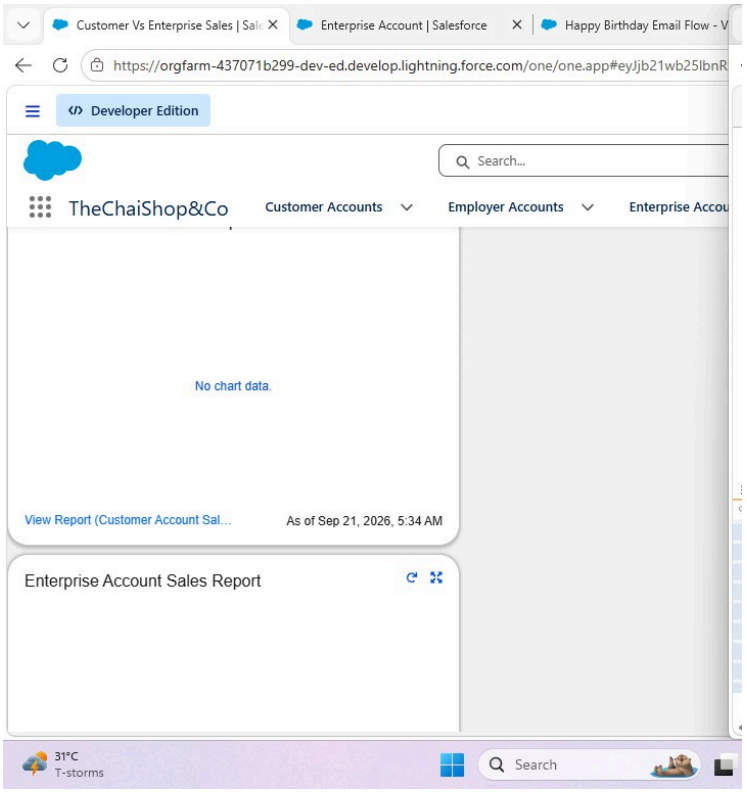

Figure 5. Custom Tabs – Salesforce implementation evidence.

06. Lightning Application

The TheChaiShop&Co; Lightning application provides a unified navigation experience. Customer Accounts, Employer Accounts, Enterprise Accounts, Reports and Dashboards are available as application areas.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

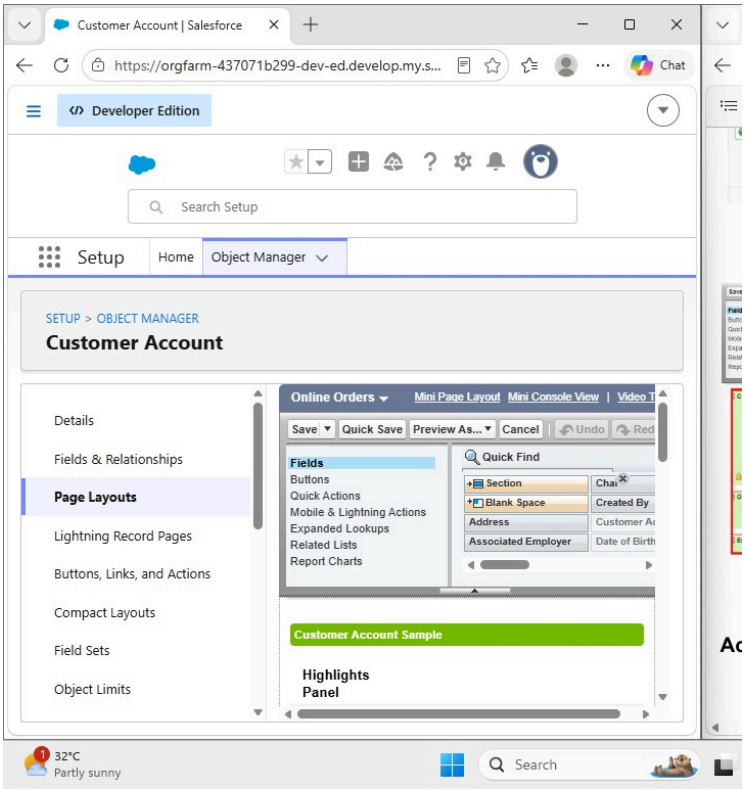

Figure 6. Lightning Application – Salesforce implementation evidence.

07. Global Picklist – Gender

The Gender global picklist standardizes values across relevant objects. The documented values are Male, Female and Others.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

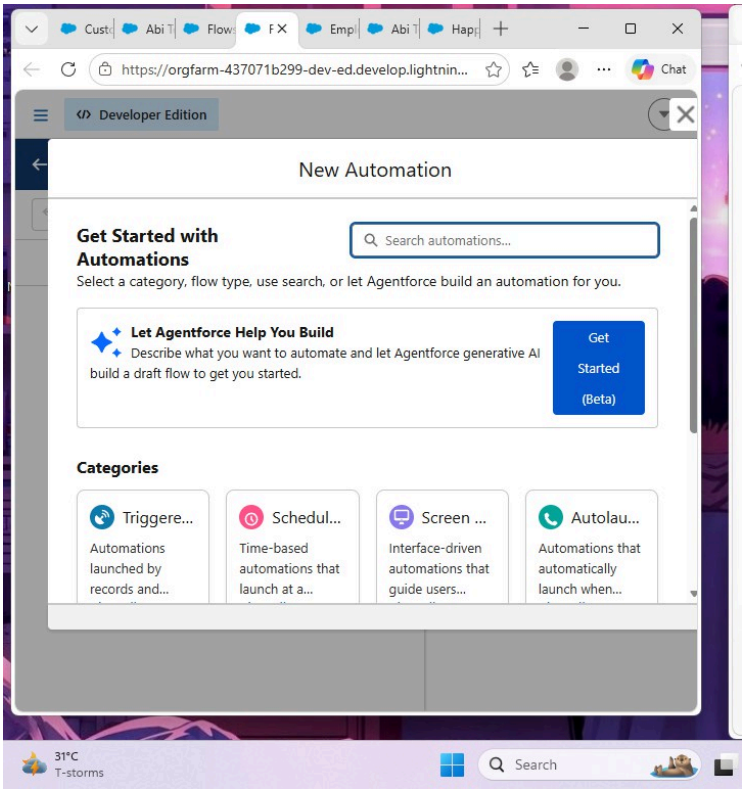

Figure 7. Global Picklist – Gender – Salesforce implementation evidence.

08. Global Picklist – Items

The Items global picklist provides standardized product choices including tea powders, biscuits, cookies and gift hampers used by the order-related fields.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

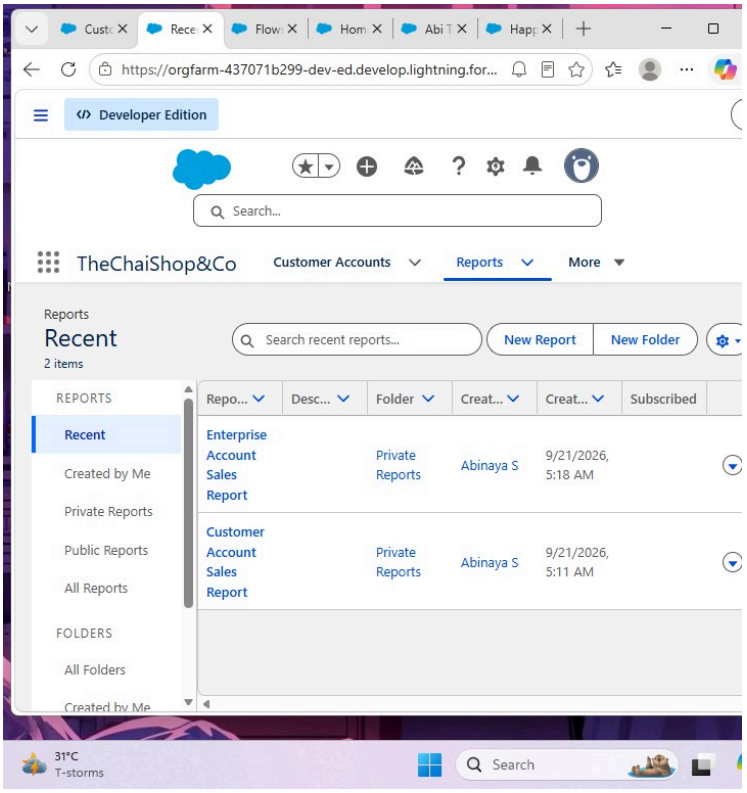

Figure 8. Global Picklist – Items – Salesforce implementation evidence.

09. Global Picklist – Payment Mode

Payment Mode standardizes transaction choices such as Gpay, PhonePe, Paytm, Credit or Debit card and Cash.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

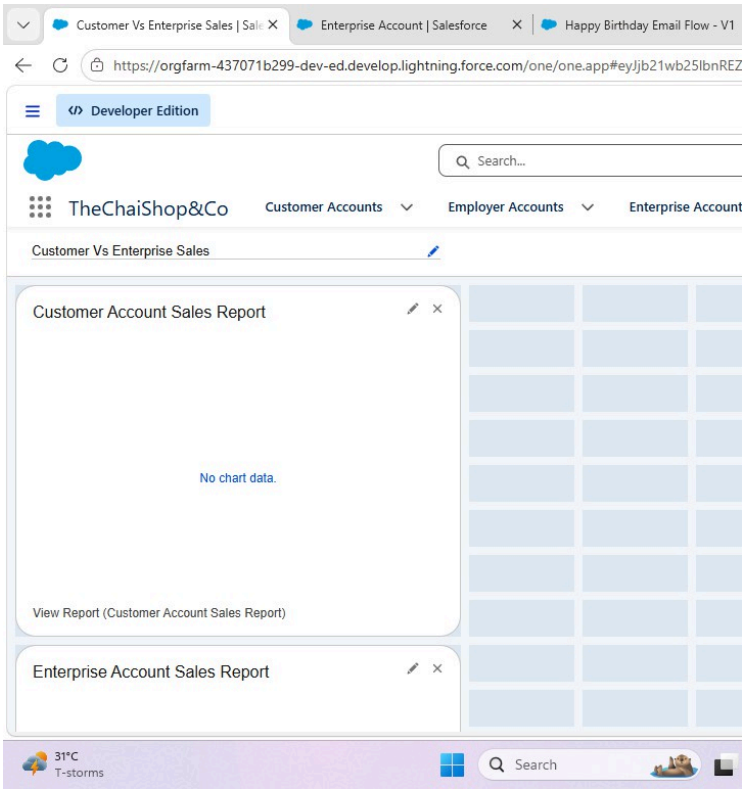

Figure 9. Global Picklist – Payment Mode – Salesforce implementation evidence.

10. Global Picklist – Type of Items

Type of Items classifies purchases into Tea powder, Cookies and Gift Hampers, allowing consistent categorization in reports.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

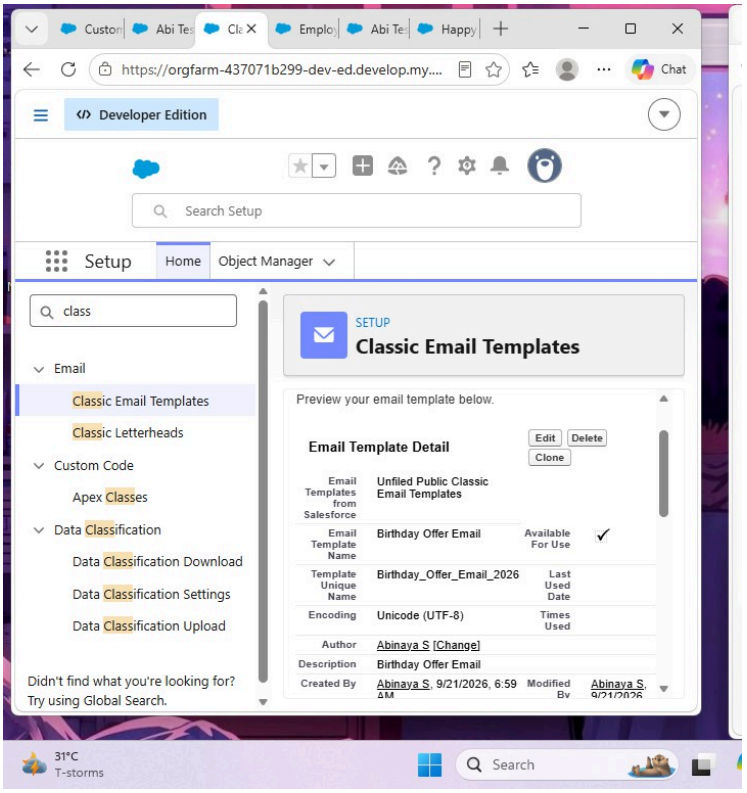

Figure 10. Global Picklist – Type of Items – Salesforce implementation evidence.

11. Customer Fields & Relationships

Customer Account contains fields for personal information, address, order details, payment mode and an Associated Employer lookup. These relationships connect customer orders to employer information.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

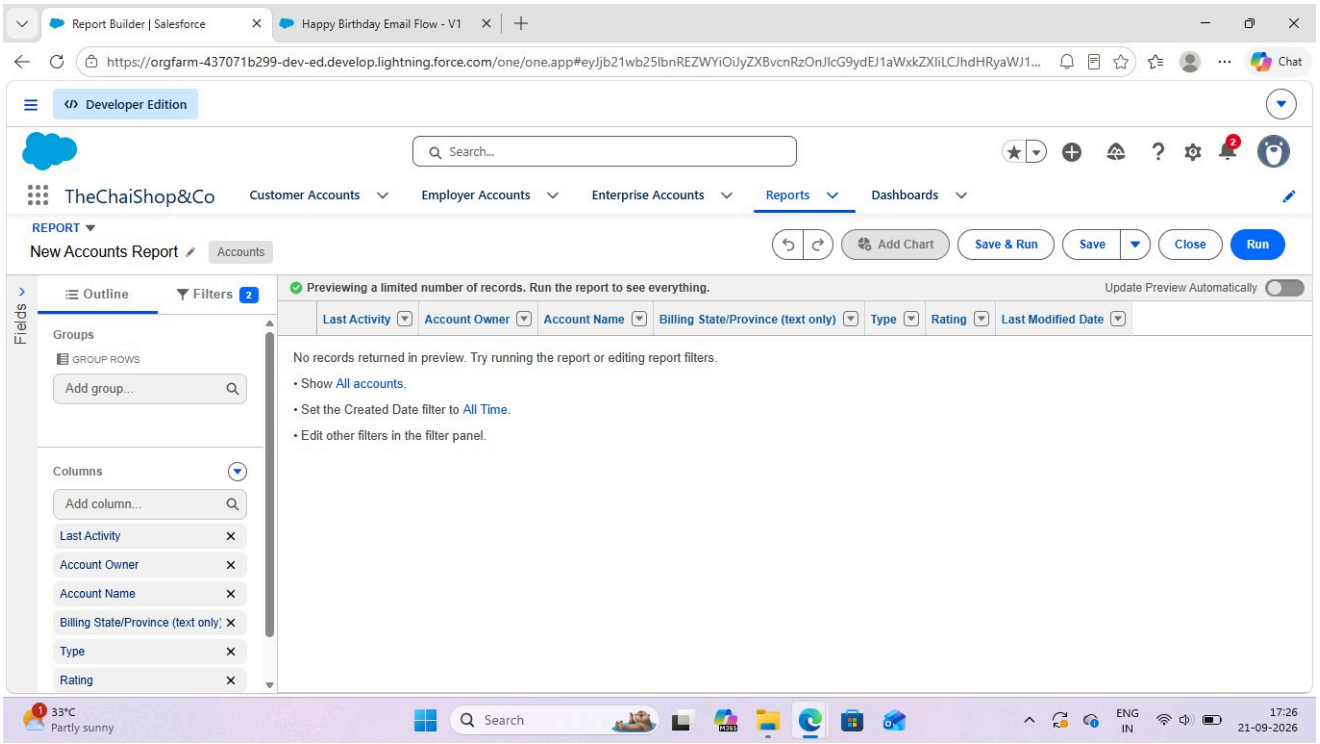

Figure 11. Customer Fields & Relationships – Salesforce implementation evidence.

12. Employer Fields

Employer Account includes First Name, Last Name, Gender, Phone Number, Email ID, Date of Birth, Aadhar Number, PAN Details, Designation and Salary.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

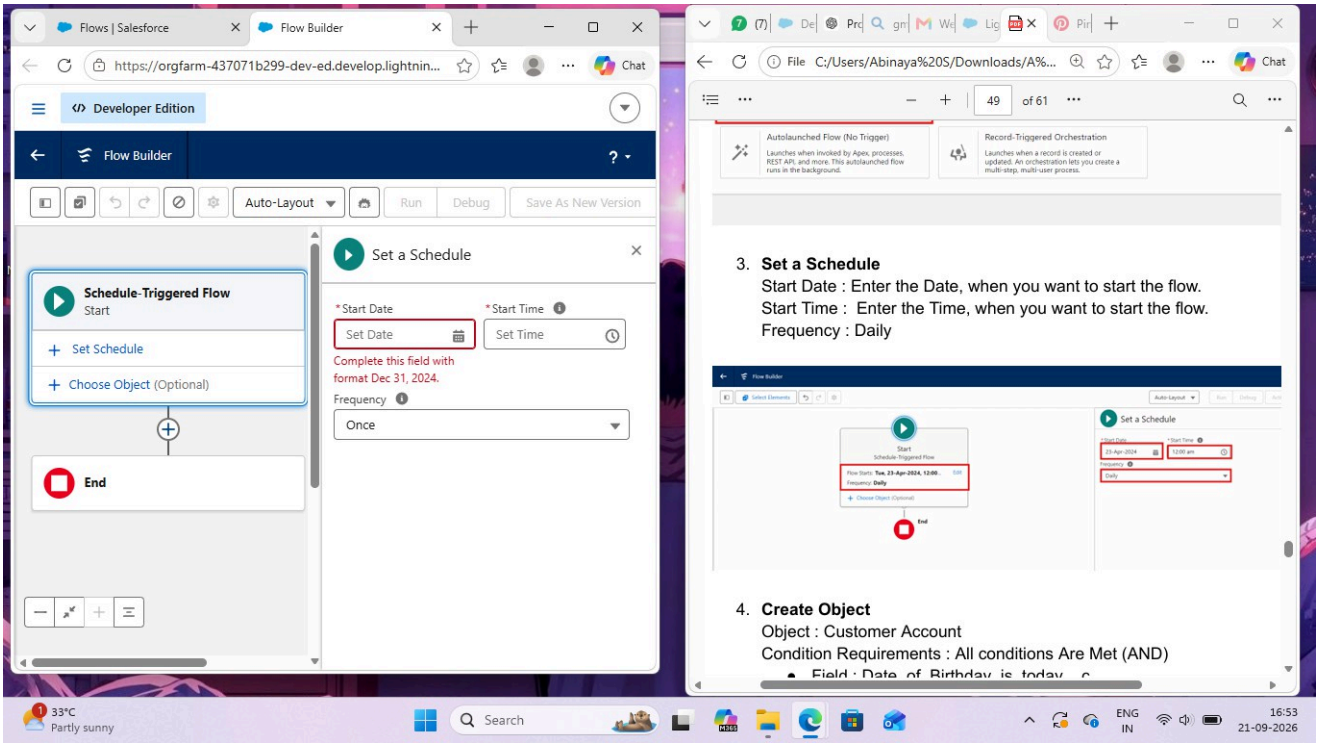

Figure 12. Employer Fields – Salesforce implementation evidence.

13. Enterprise Fields

Enterprise Account includes Enterprise Name, Phone Number, Email ID, Address, Type of Items, Products Purchased, Associated Employer, Payment Mode and billing-related fields.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

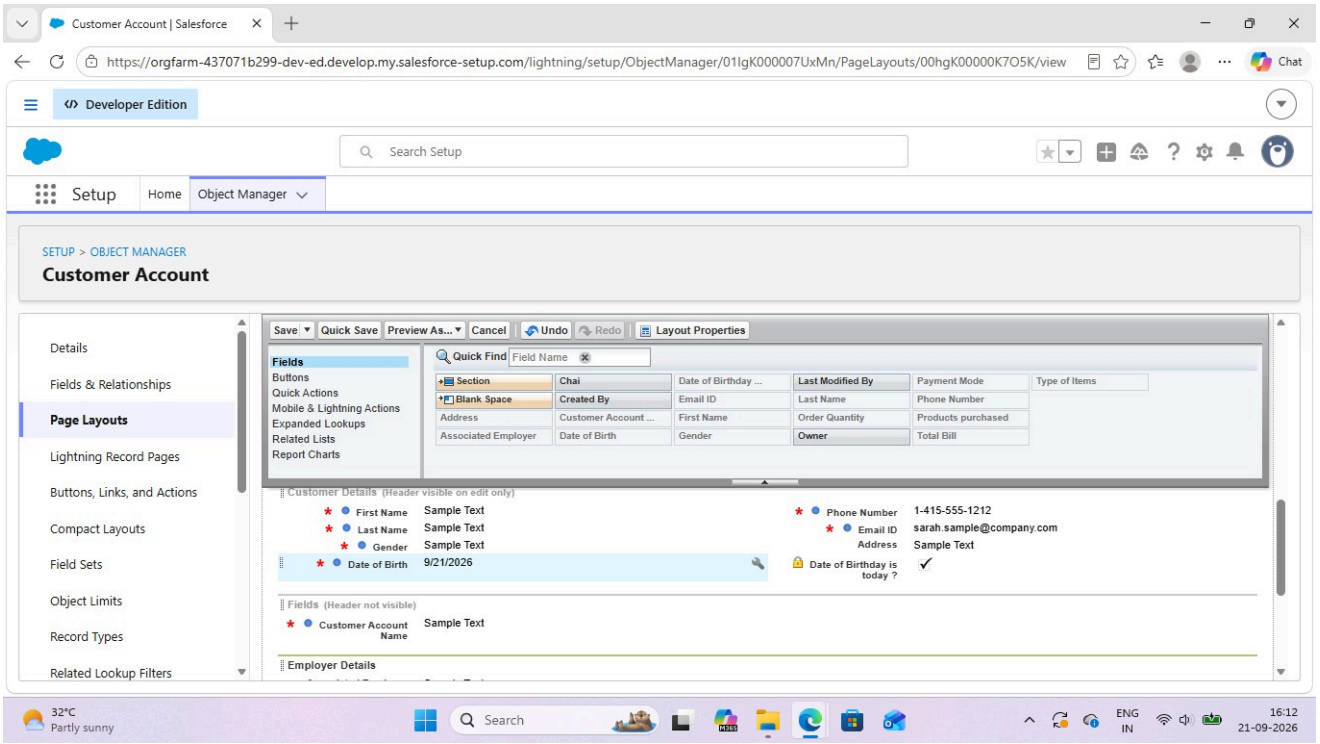

Figure 13. Enterprise Fields – Salesforce implementation evidence.

14. Page Layout – Customer Details

The Customer Details section groups customer information into a clear form structure so that users can enter and review records consistently.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

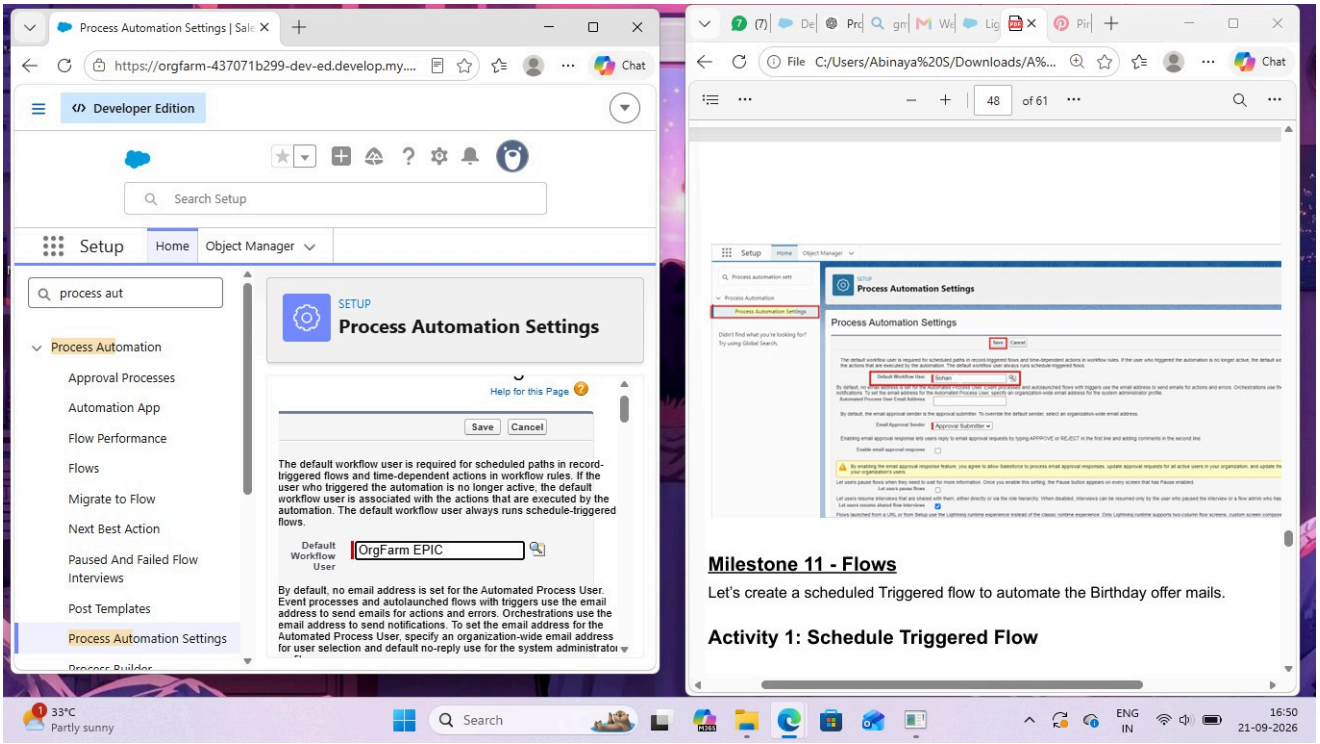

Figure 14. Page Layout – Customer Details – Salesforce implementation evidence.

15. Page Layout – Order Details

The Order Details section organizes product, quantity and payment information. It supports the project's online and walk-in order record design.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

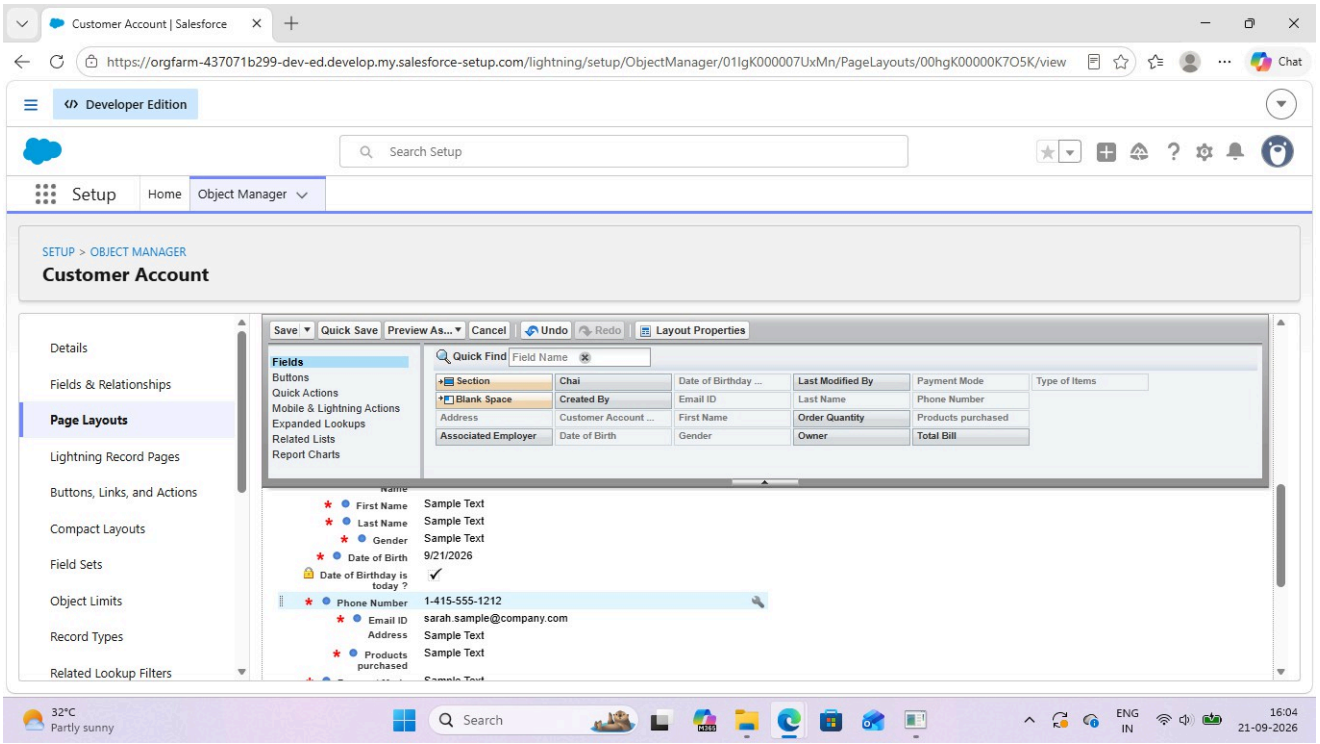

Figure 15. Page Layout – Order Details – Salesforce implementation evidence.

16. Page Layout – Employer Details

The Employer Details section provides a clear place for relationship information associated with customer orders.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

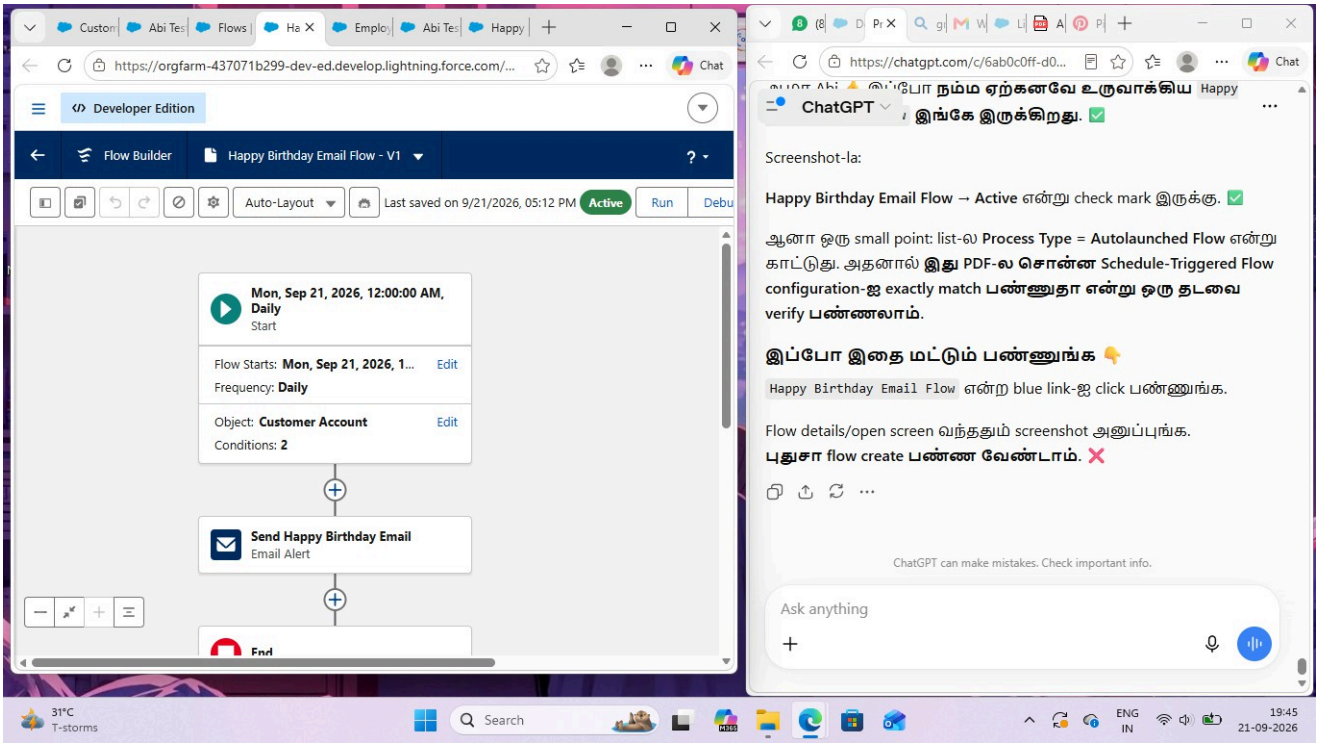

Figure 16. Page Layout – Employer Details – Salesforce implementation evidence.

17. Record Type – Online Orders

The Online Orders record type uses the Online Orders page layout to distinguish online order records from walk-in records.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

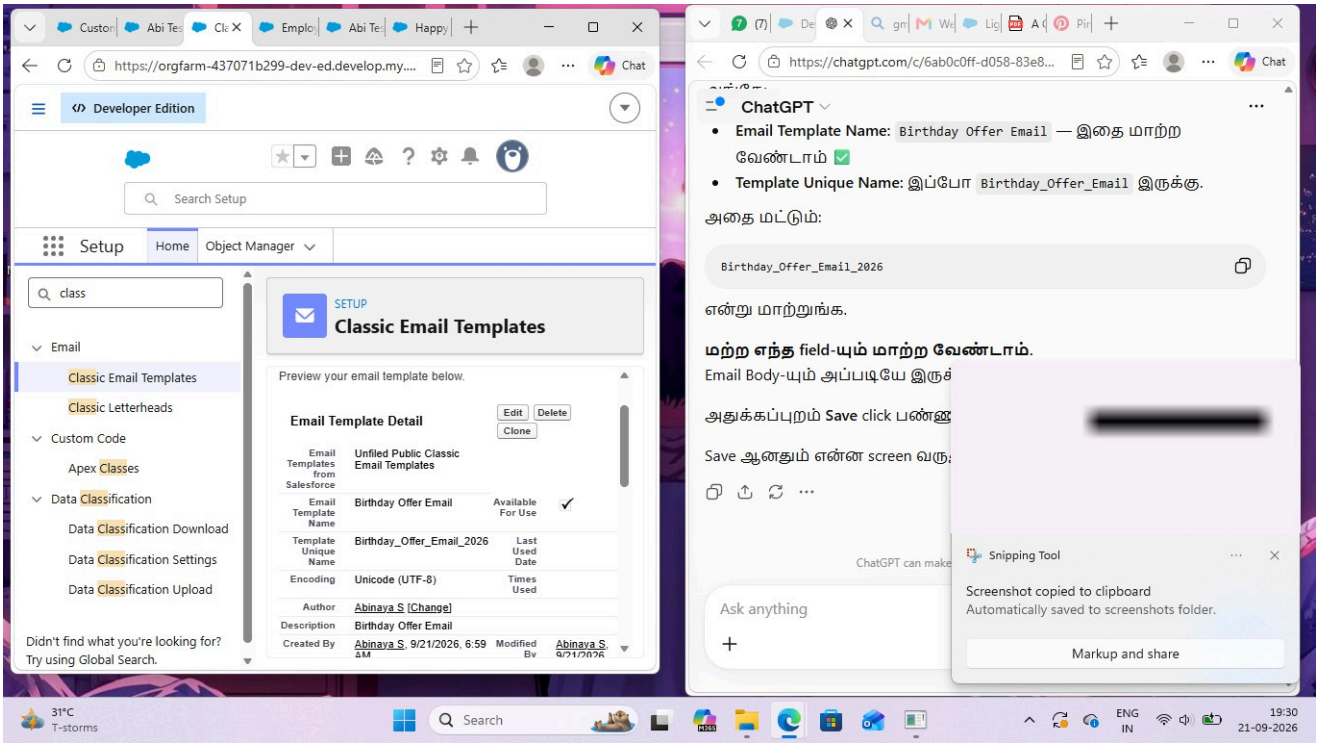

Figure 17. Record Type – Online Orders – Salesforce implementation evidence.

18. Record Type – Walk-In Orders

The Walk-In Orders record type uses the Walk-In Orders layout and provides the second documented order-entry variation.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

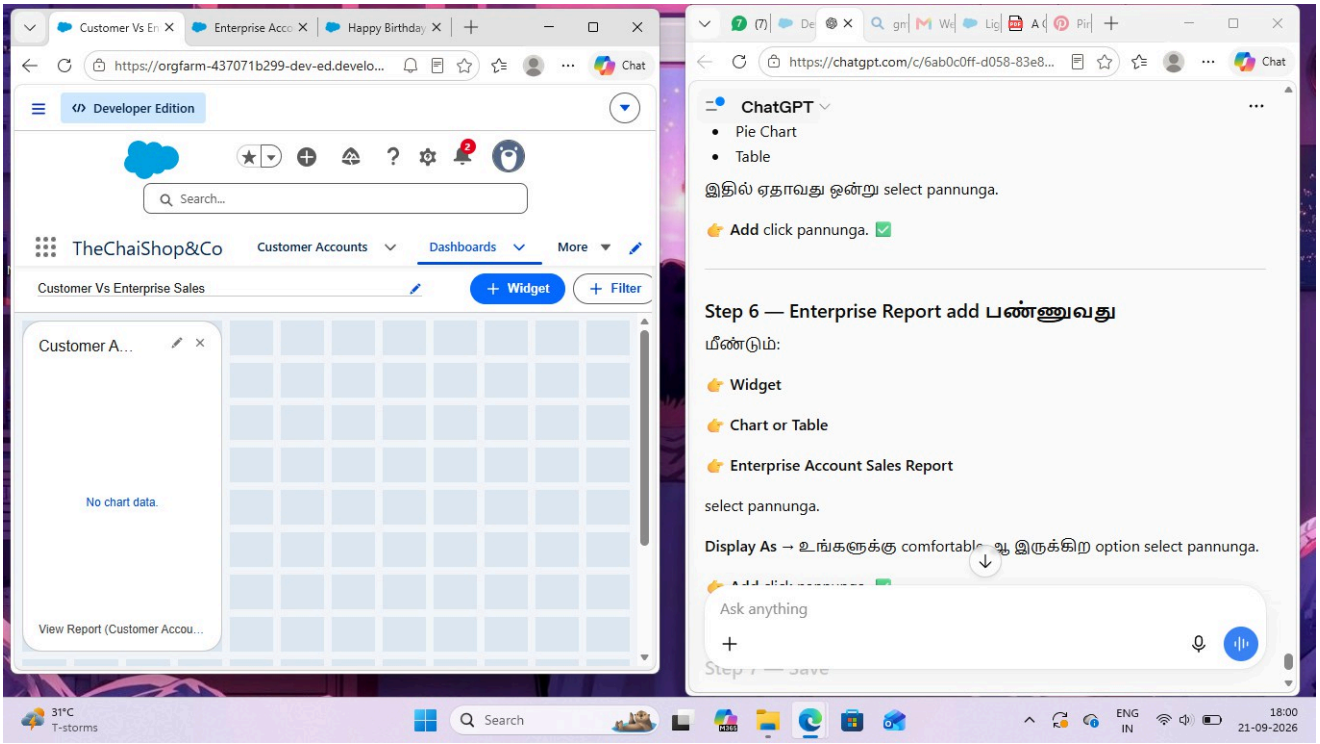

Figure 18. Record Type – Walk-In Orders – Salesforce implementation evidence.

19. Validation – Aadhaar

Aadhaar validation is intended to prevent invalid identification values. Testing with an invalid value produced a validation message, confirming the rule is active.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

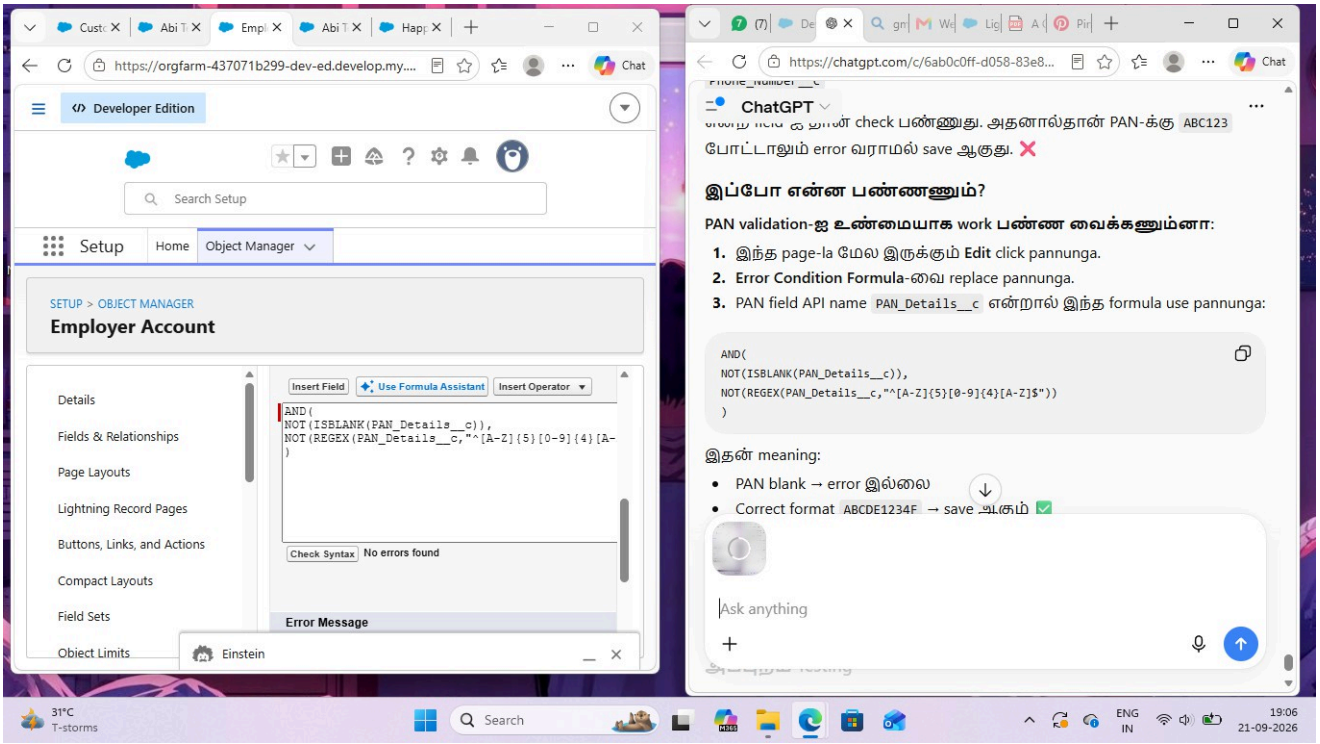

Figure 19. Validation – Aadhaar – Salesforce implementation evidence.

20. Validation – PAN

PAN validation was configured against the PAN Details field using a standard PAN format check. The corrected working rule checks the actual PAN field used in the project.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

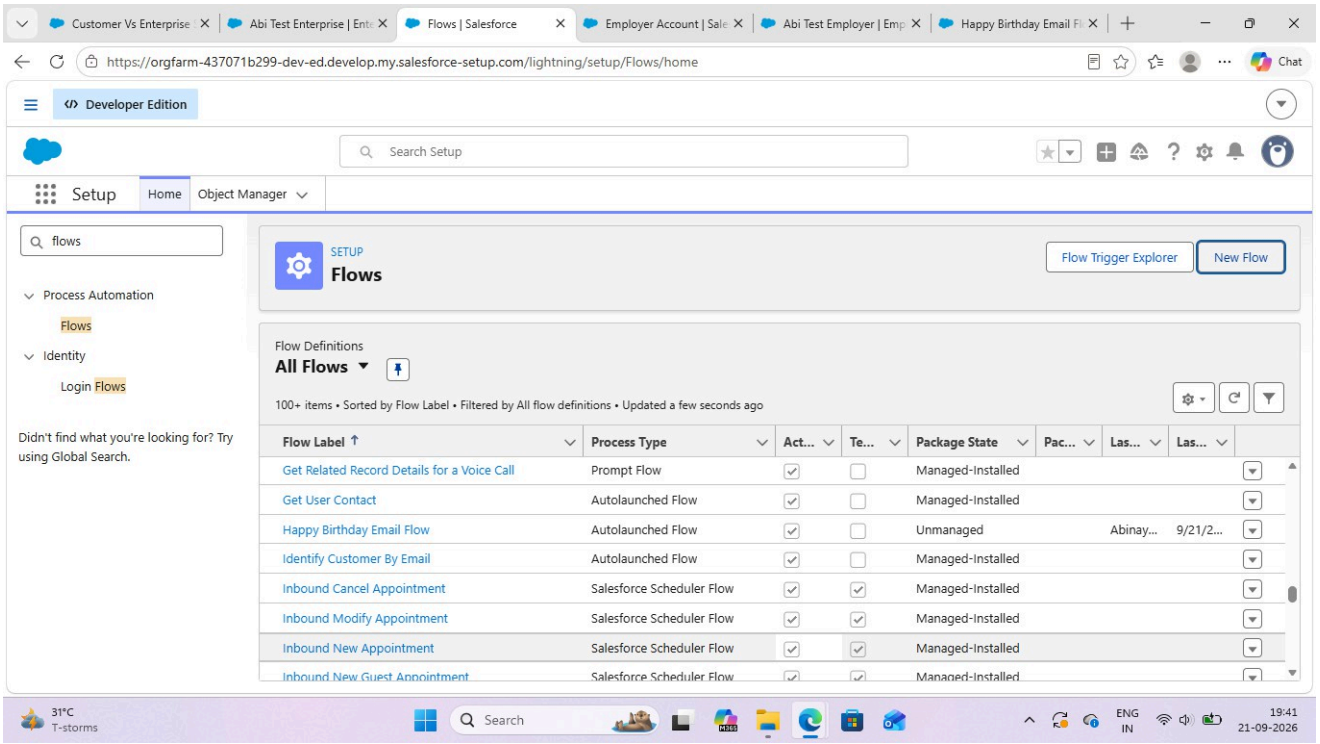

Figure 20. Validation – PAN – Salesforce implementation evidence.

21. Validation – Phone Number

Phone validation is used to reduce invalid contact data. The project testing included invalid phone inputs and confirmation of validation behavior.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

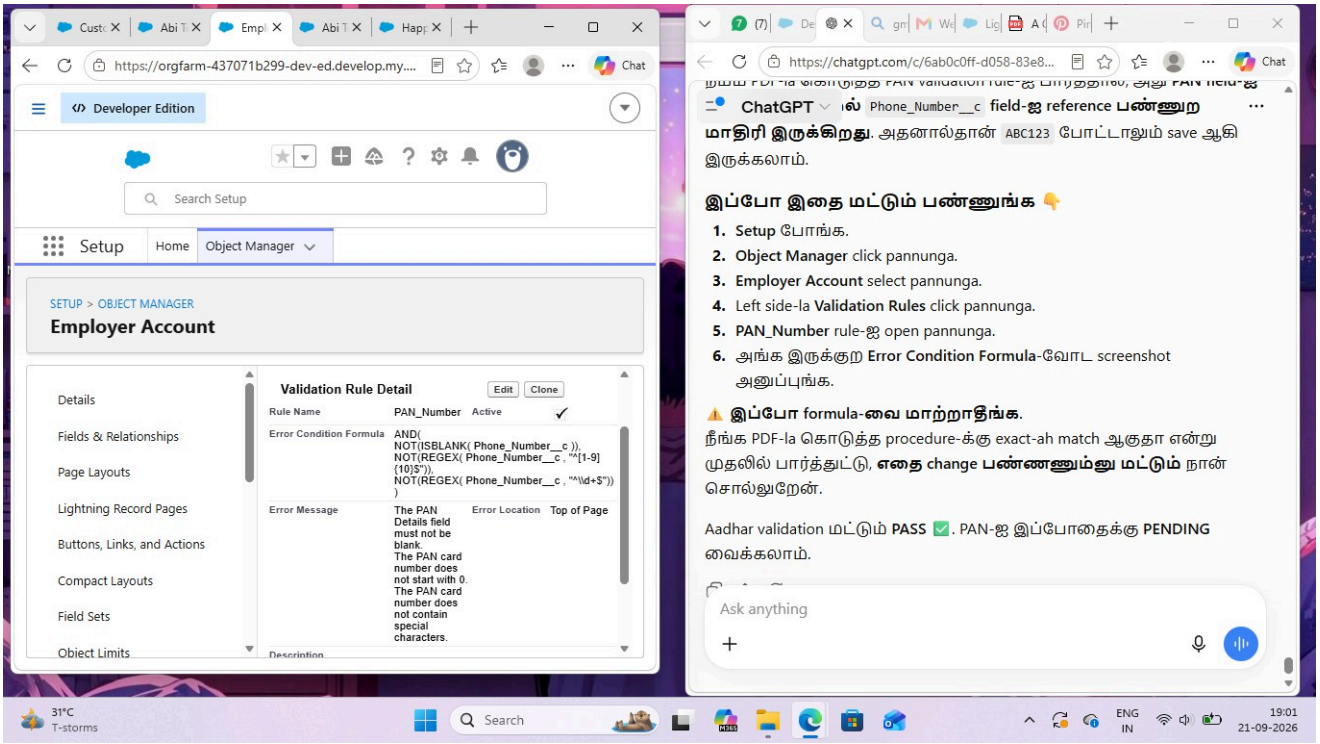

Figure 21. Validation – Phone Number – Salesforce implementation evidence.

22. Email Template – Birthday Offer

The Birthday Offer Email template is a Classic Text Email Template. It includes a personalized greeting and the documented birthday offer message.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

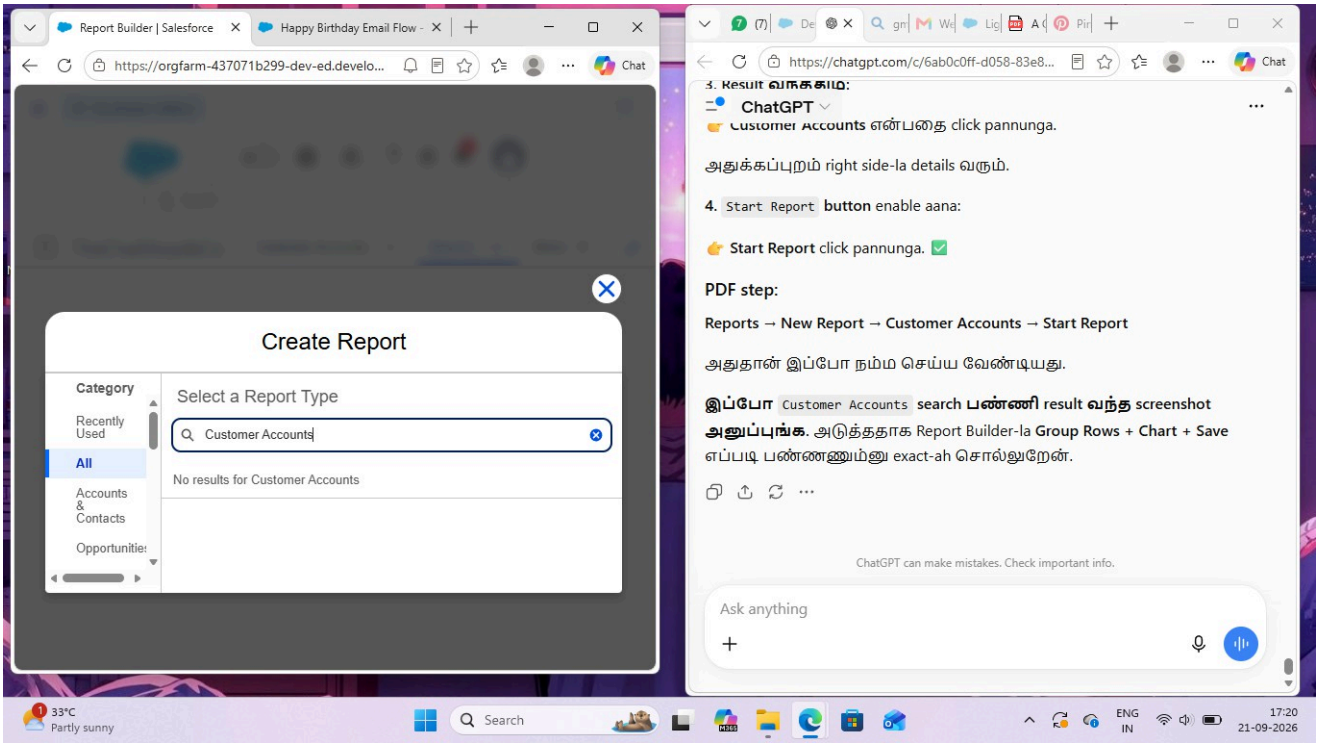

Figure 22. Email Template – Birthday Offer – Salesforce implementation evidence.

23. Email Template – Template Details

The saved template detail confirms the template name, unique name, encoding, description and availability for use.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

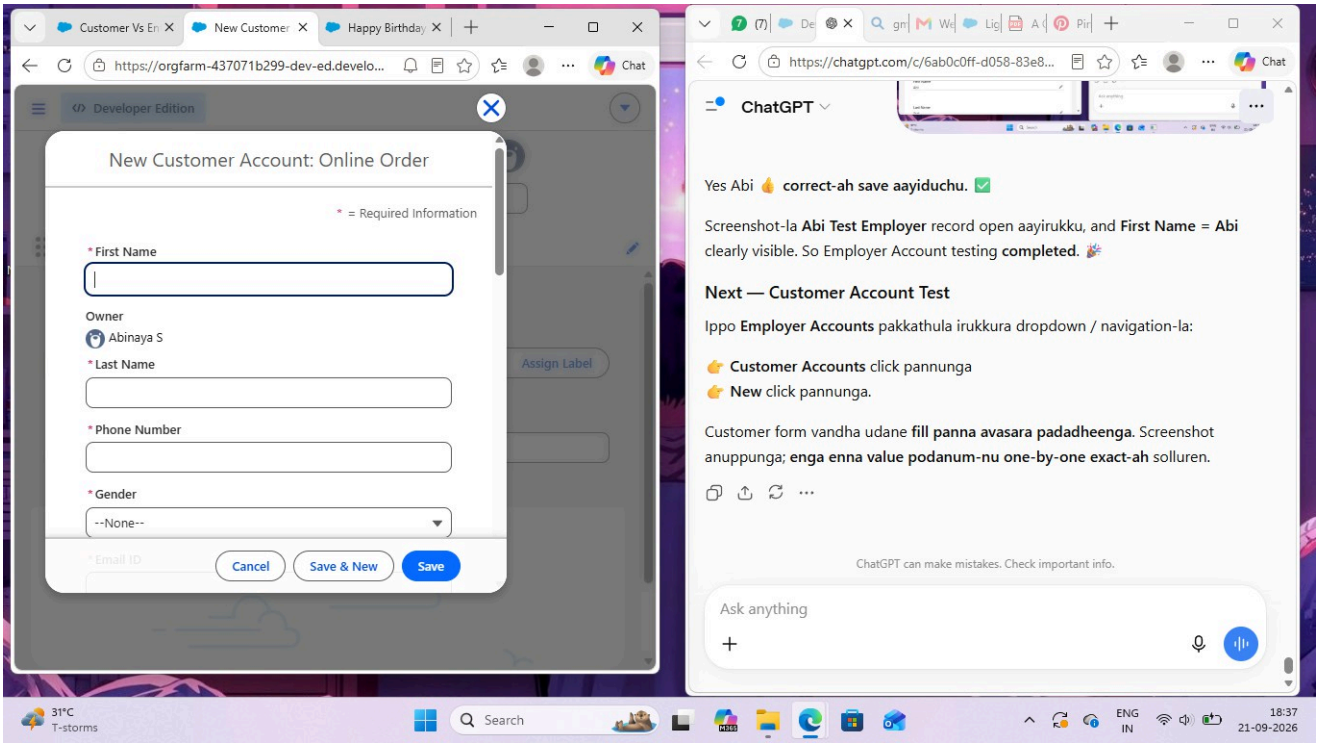

Figure 23. Email Template – Template Details – Salesforce implementation evidence.

24. Email Alert – Birthday Notification

The Happy Birthday email alert is attached to the Customer Account object and uses the Birthday Offer Email template.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

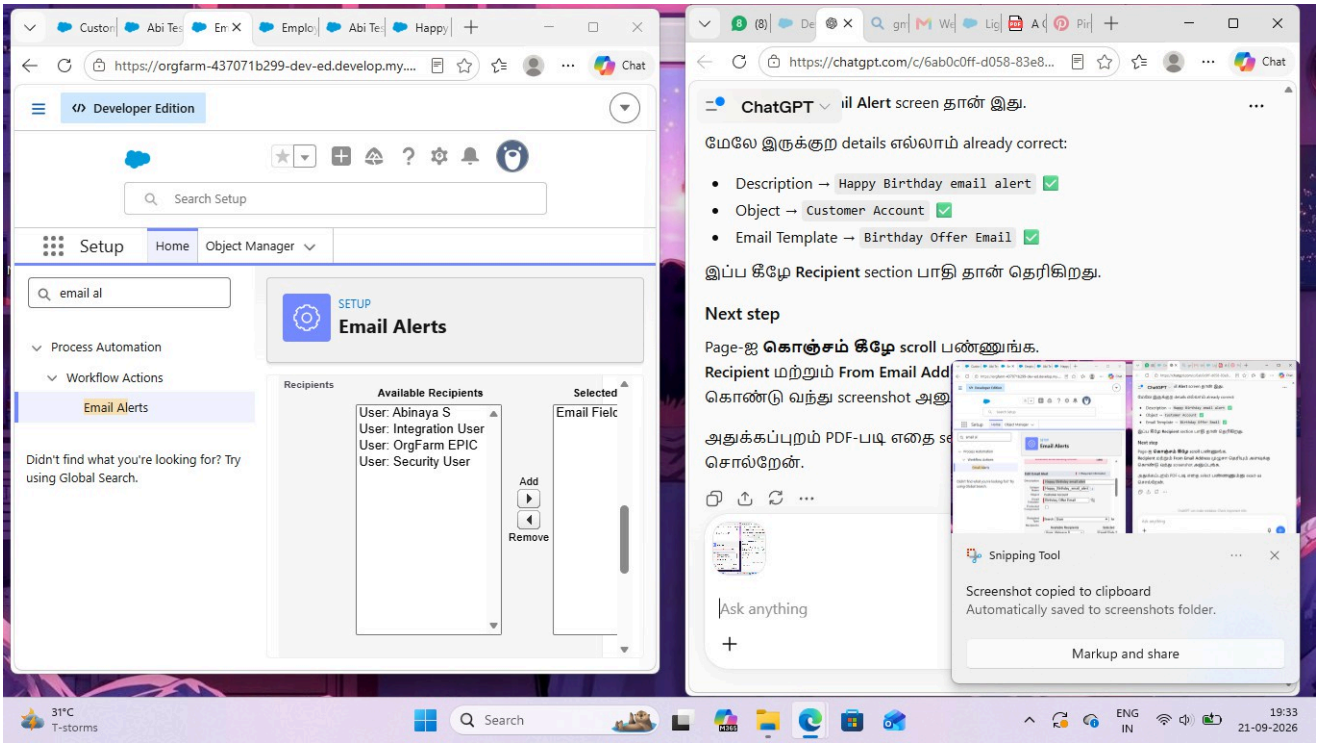

Figure 24. Email Alert – Birthday Notification – Salesforce implementation evidence.

25. Email Alert – Recipient Configuration

The recipient configuration uses the Customer Account Email ID field so that the notification can be directed to the customer's stored email address.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

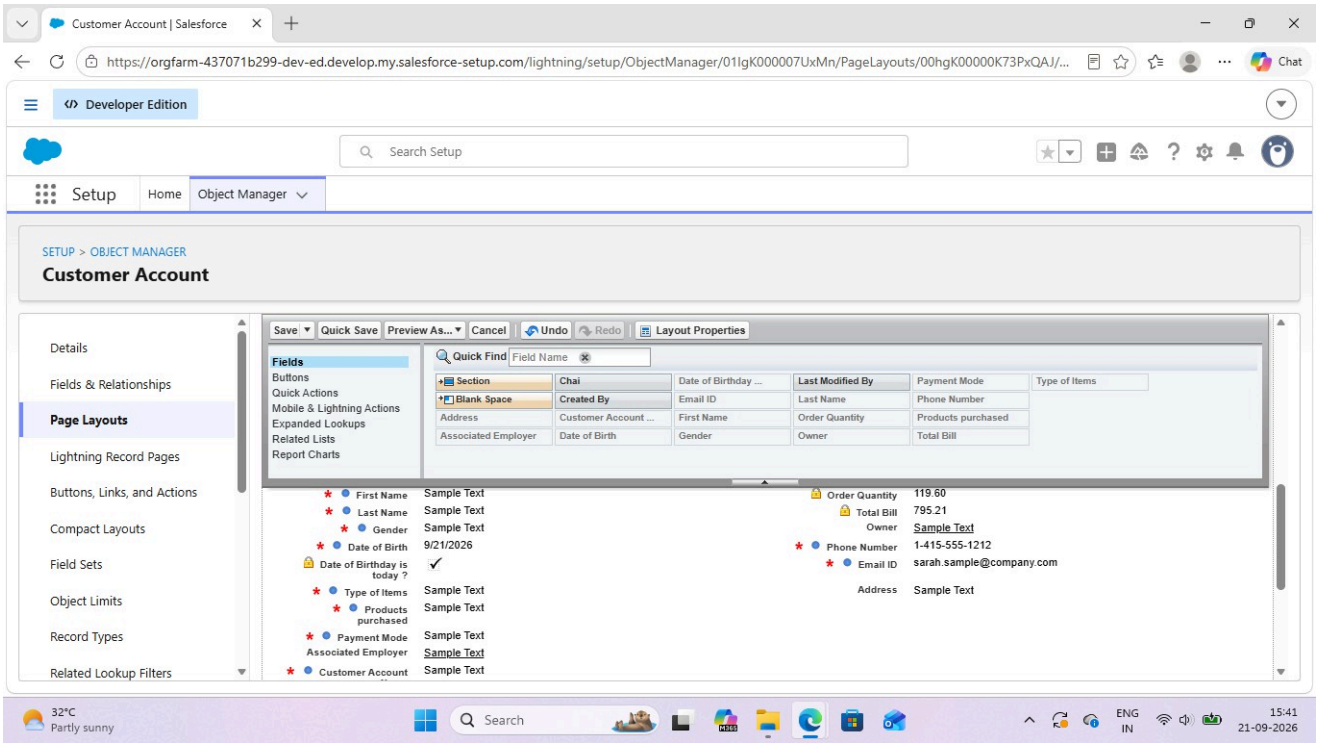

Figure 25. Email Alert – Recipient Configuration – Salesforce implementation evidence.

26. Email Alert – From Address

The email alert uses the Default Workflow User's email address as the sender, matching the documented project configuration.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

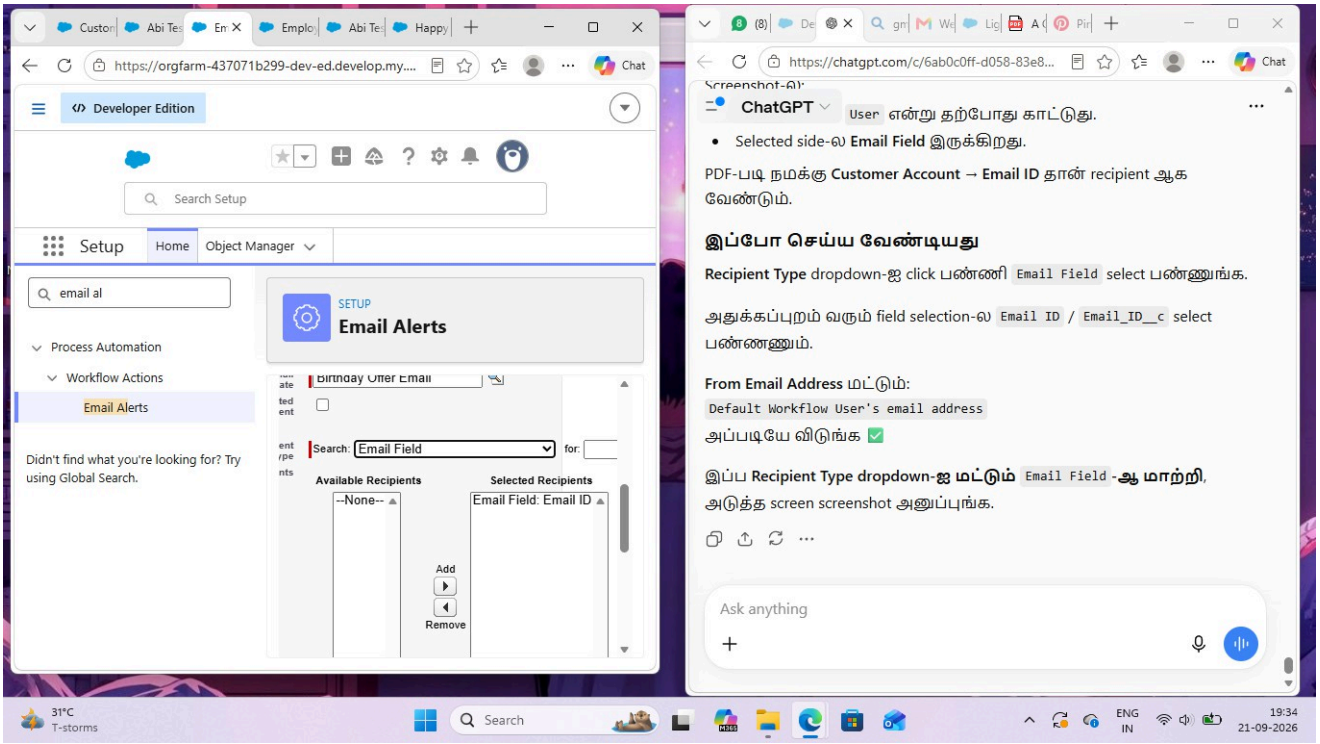

Figure 26. Email Alert – From Address – Salesforce implementation evidence.

27. Schedule-Triggered Flow – Start

The birthday automation is implemented as a schedule-triggered flow that runs daily. The flow evaluates Customer Account records in a scheduled batch.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

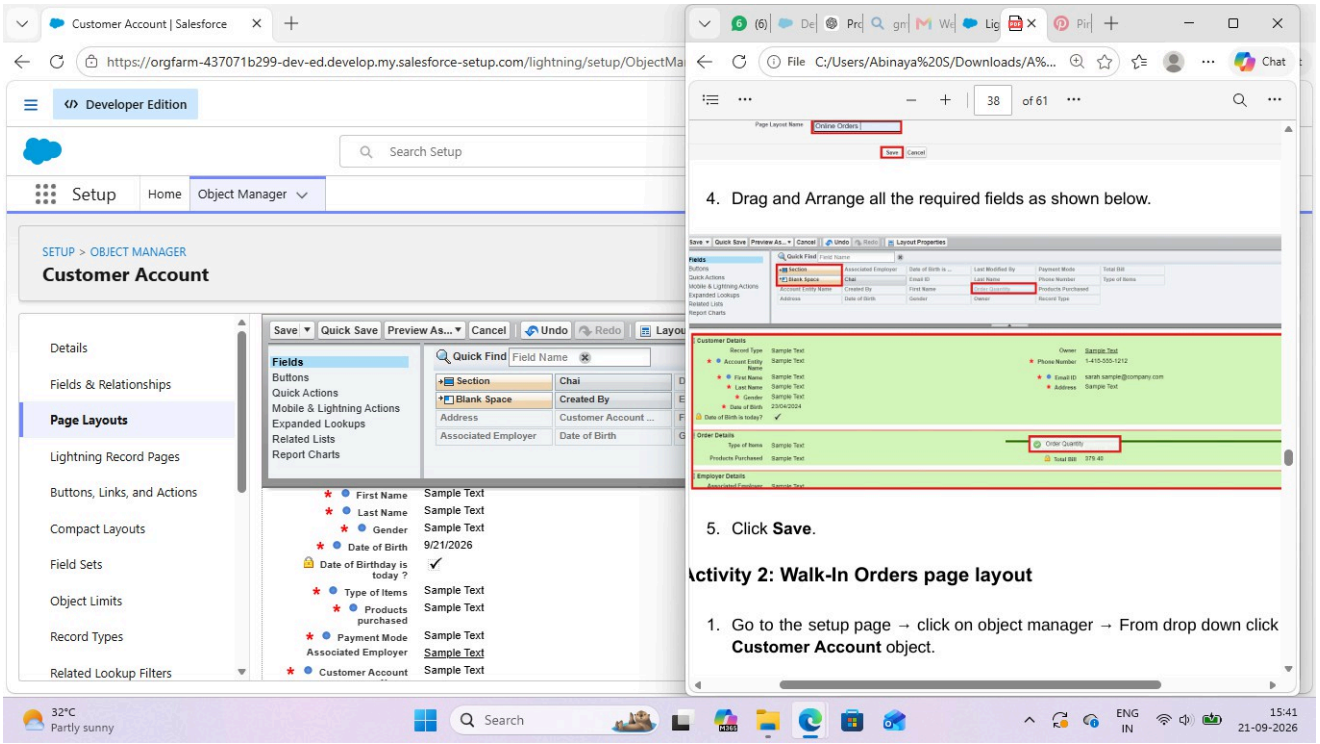

Figure 27. Schedule-Triggered Flow – Start – Salesforce implementation evidence.

28. Schedule-Triggered Flow – Conditions

The flow checks whether Date of Birthday is Today equals True and whether Email ID is not null before sending the birthday email.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

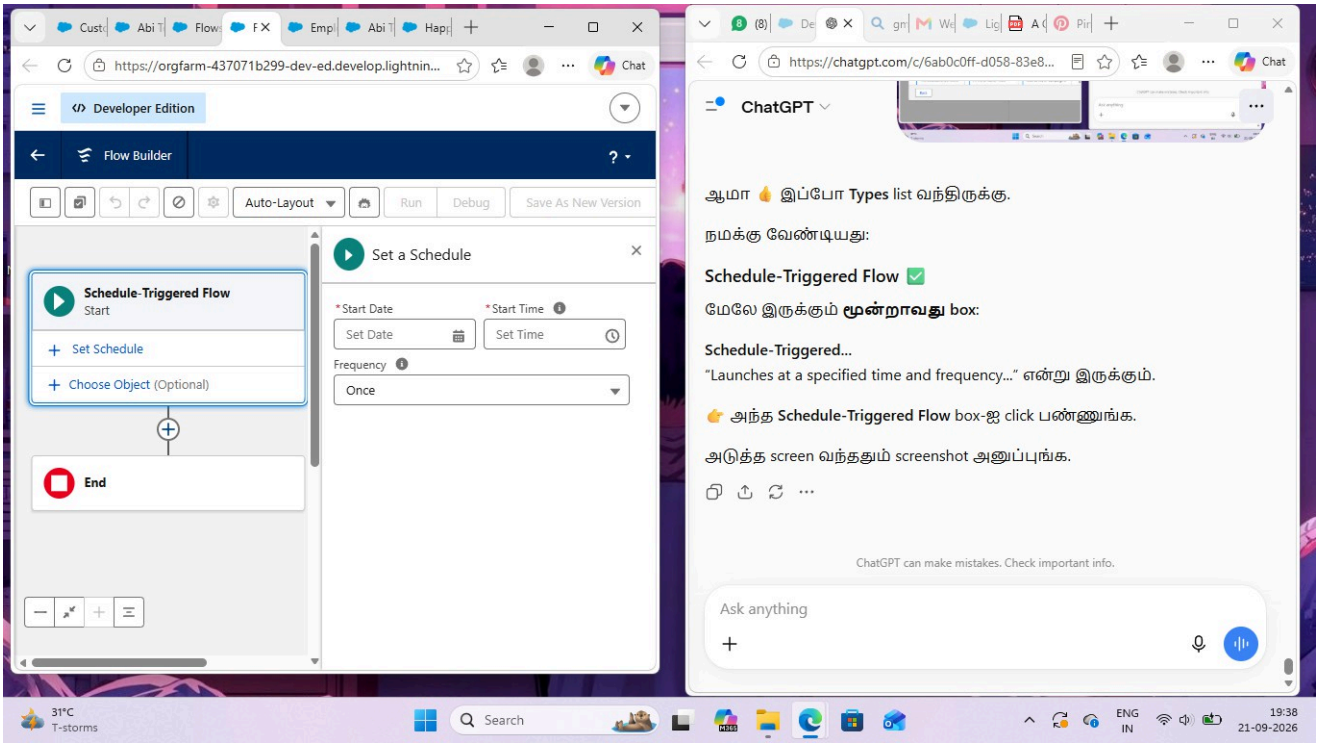

Figure 28. Schedule-Triggered Flow – Conditions – Salesforce implementation evidence.

29. Flow Action – Send Happy Birthday Email

The flow contains an Email Alert action labelled Send Happy Birthday Email, connecting the scheduled conditions to the notification step.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

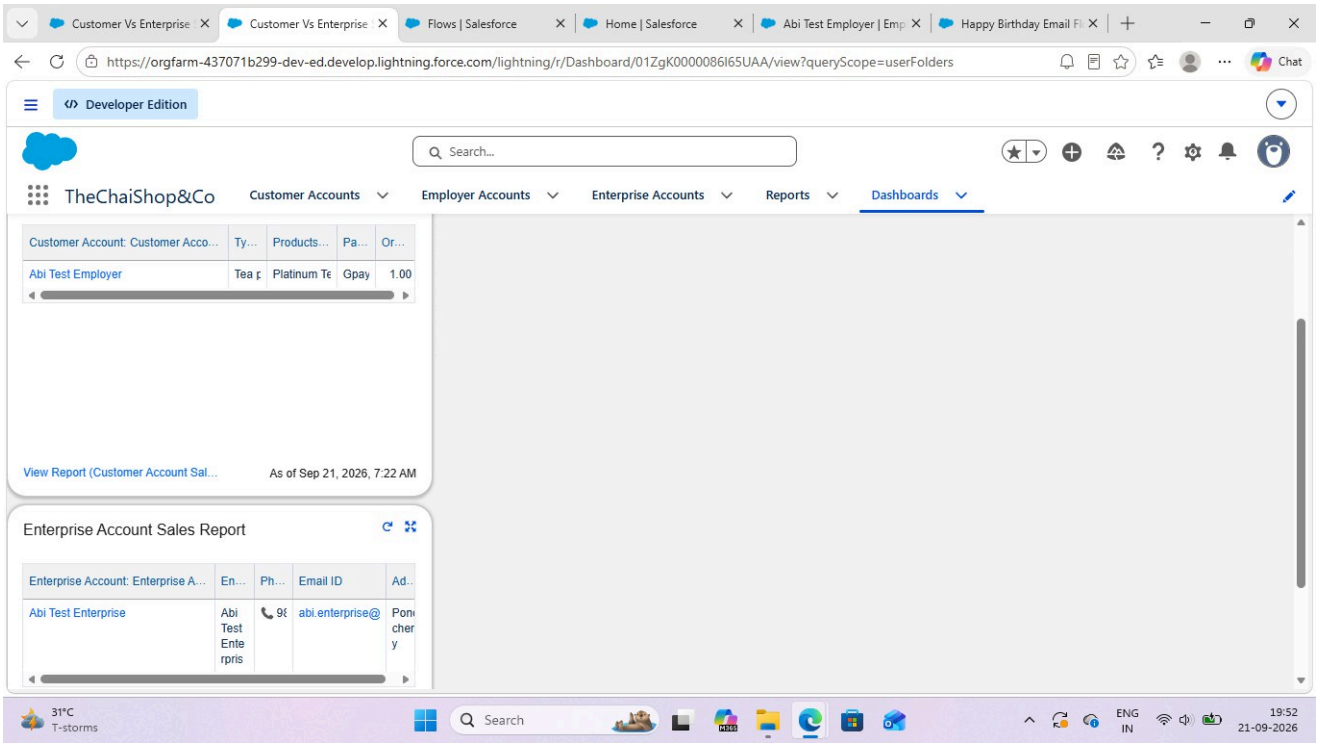

Figure 29. Flow Action – Send Happy Birthday Email – Salesforce implementation evidence.

30. Flow Activation

The saved Happy Birthday Email Flow is activated so that the configured daily automation can run in the Salesforce environment.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

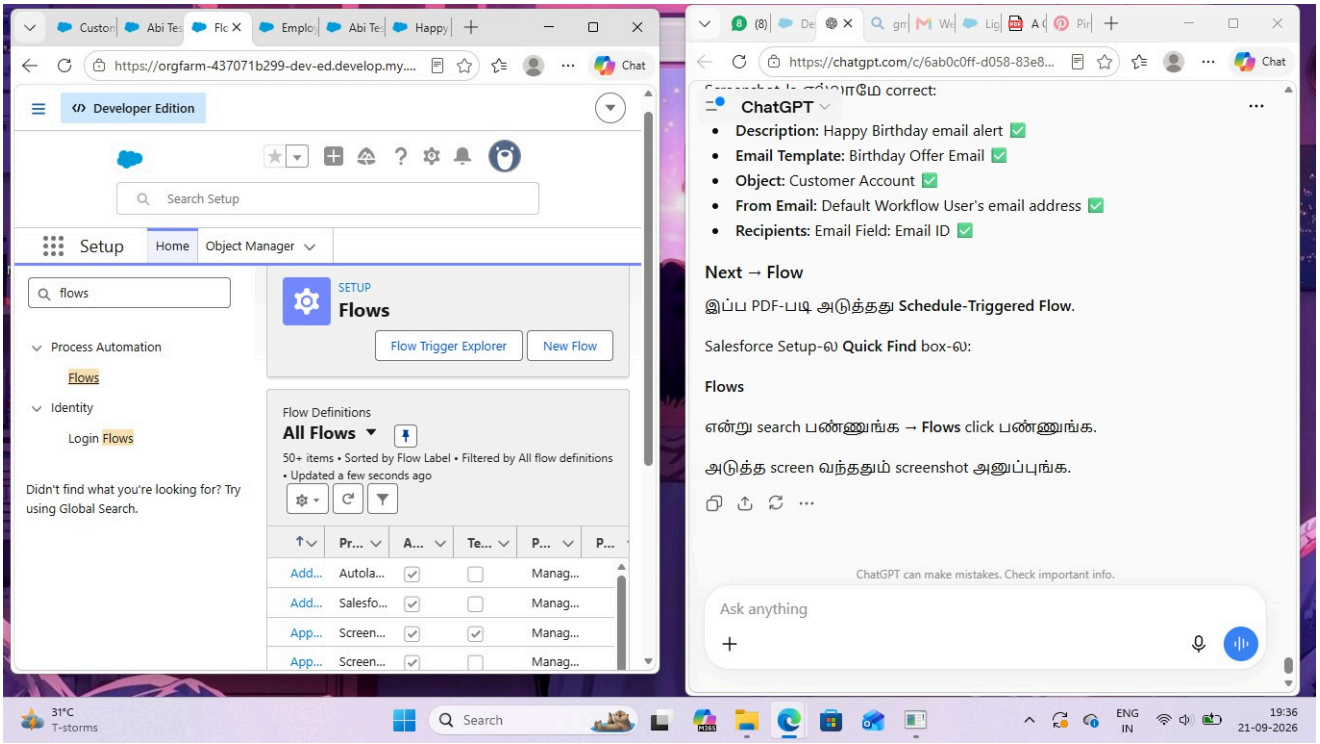

Figure 30. Flow Activation – Salesforce implementation evidence.

31. Customer Account Test Record

A test Customer Account was created with customer details, product selection, payment mode and an associated employer to verify the object configuration.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

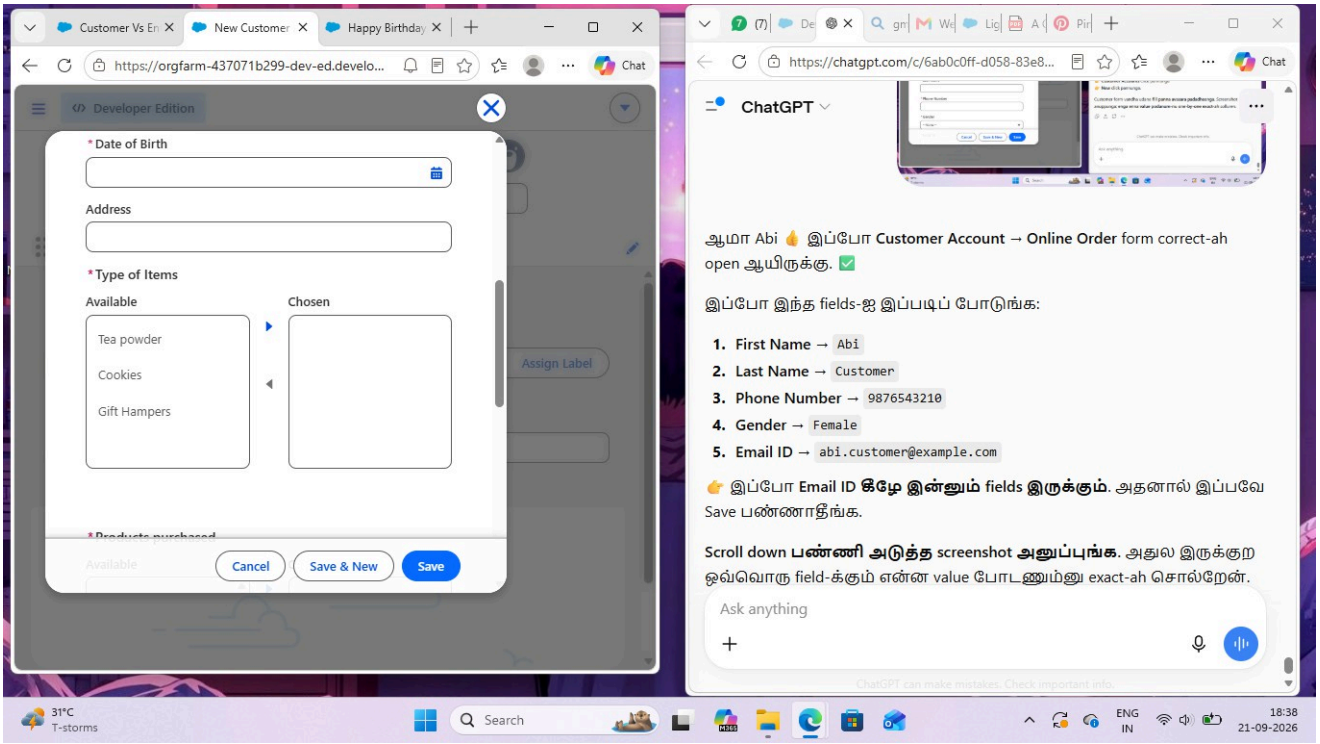

Figure 31. Customer Account Test Record – Salesforce implementation evidence.

32. Enterprise Account Test Record

A test Enterprise Account was created with enterprise details, product selection, payment mode and an associated employer to verify the business-order configuration.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

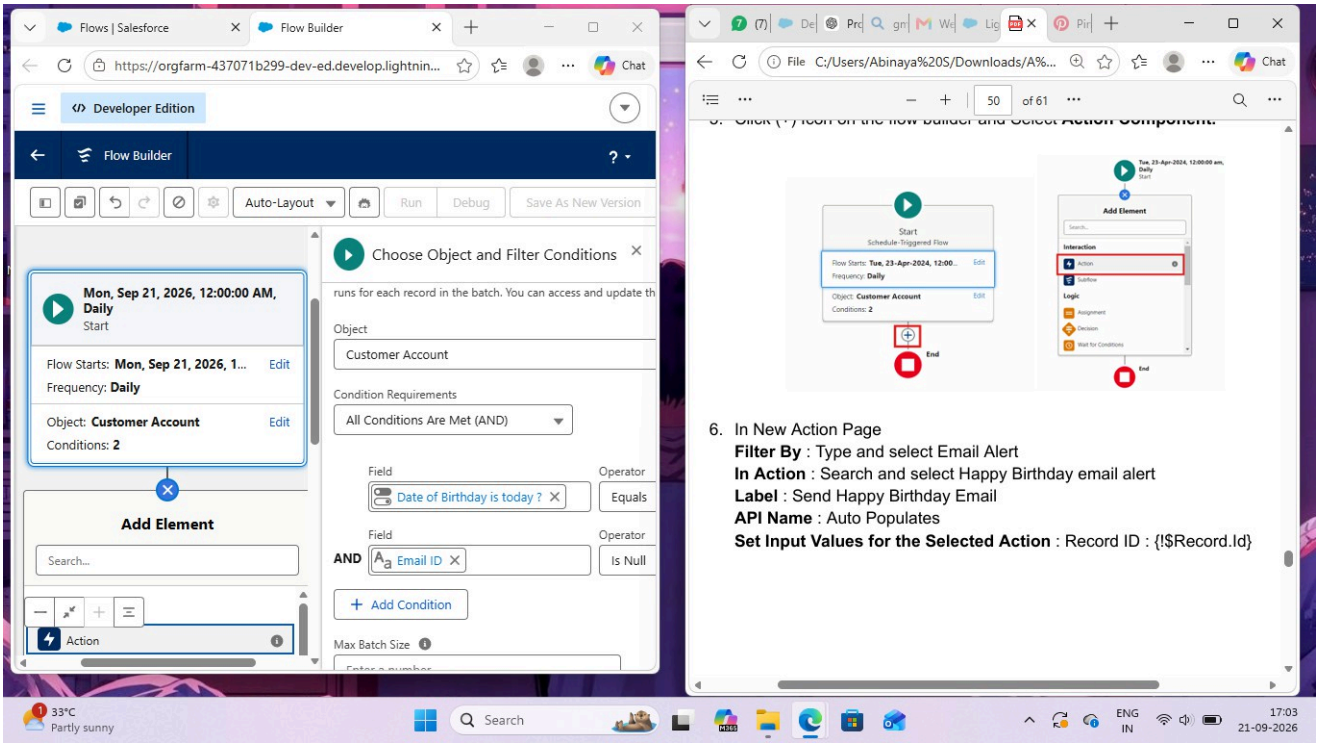

Figure 32. Enterprise Account Test Record – Salesforce implementation evidence.

33. Customer Account Sales Report

The Customer Account Sales Report groups and displays customer order information. The test customer record is visible in the report data.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

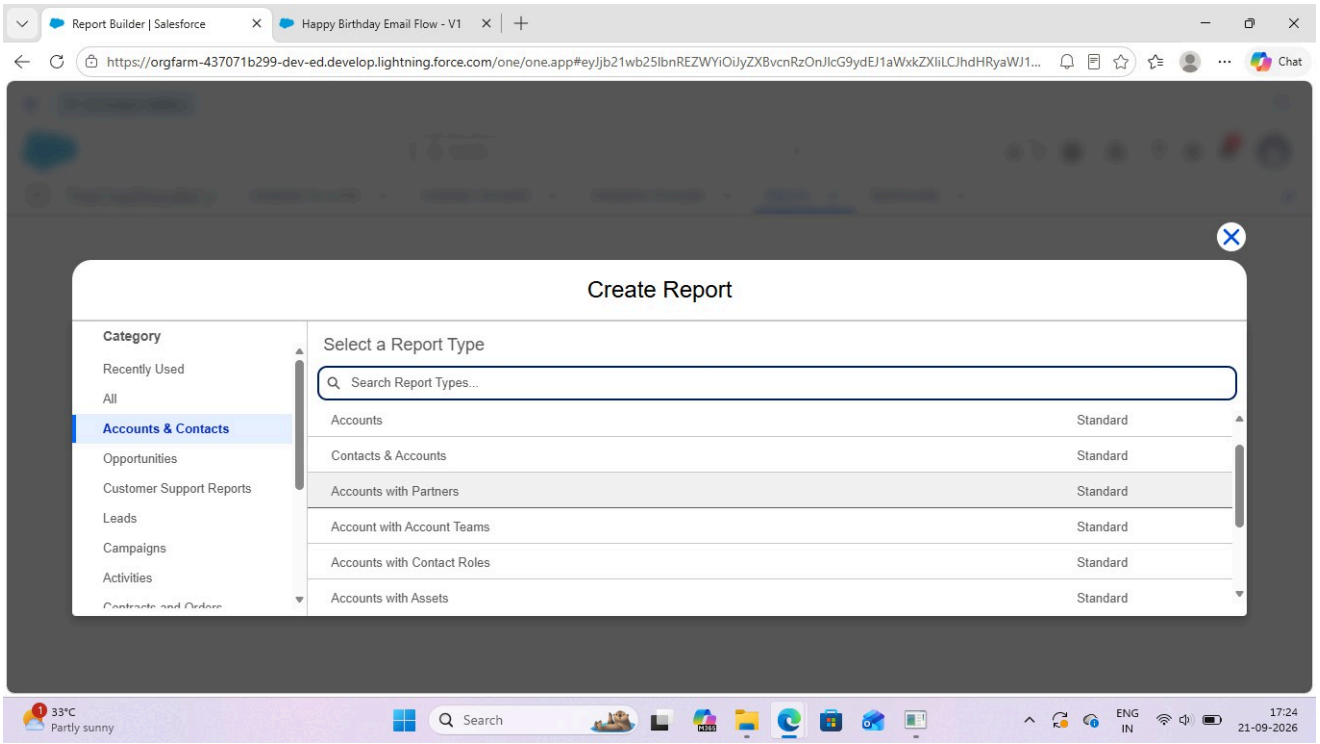

Figure 33. Customer Account Sales Report – Salesforce implementation evidence.

34. Enterprise Account Sales Report

The Enterprise Account Sales Report displays enterprise order information and supports grouping by Type of Items for sales analysis.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

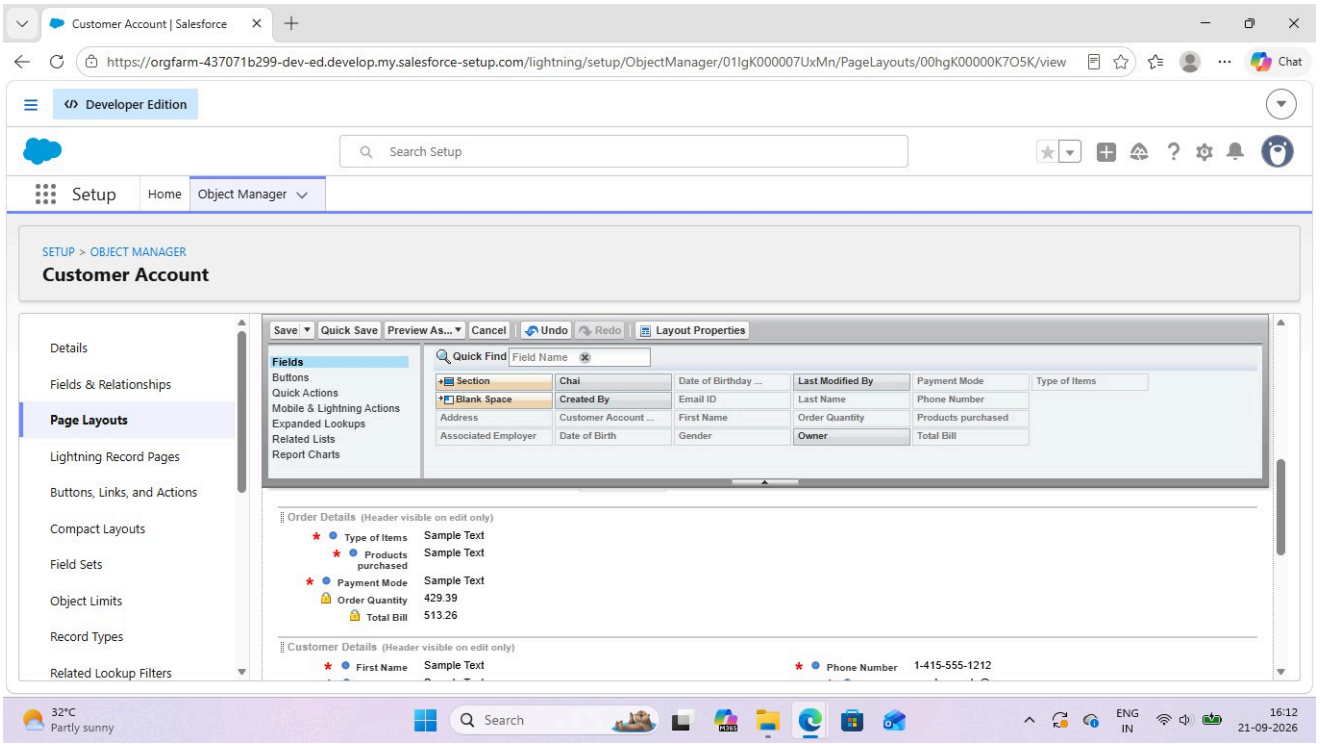

Figure 34. Enterprise Account Sales Report – Salesforce implementation evidence.

35. Dashboard & Final Analytics

The Customer Vs Enterprise Sales dashboard combines the customer and enterprise reports so that the configured sales information can be viewed together.

Implementation Note

The screenshot below is included as project evidence from the Salesforce configuration and testing work. It documents the visual state of the application/setup page used while completing this milestone. The evidence is presented at a larger size so that labels, fields and configuration details remain visible in the final submitted report.

Result / Verification

- Configuration recorded as part of the TheChaiShop&Co; CRM implementation.
- Screenshot retained as supporting implementation evidence.

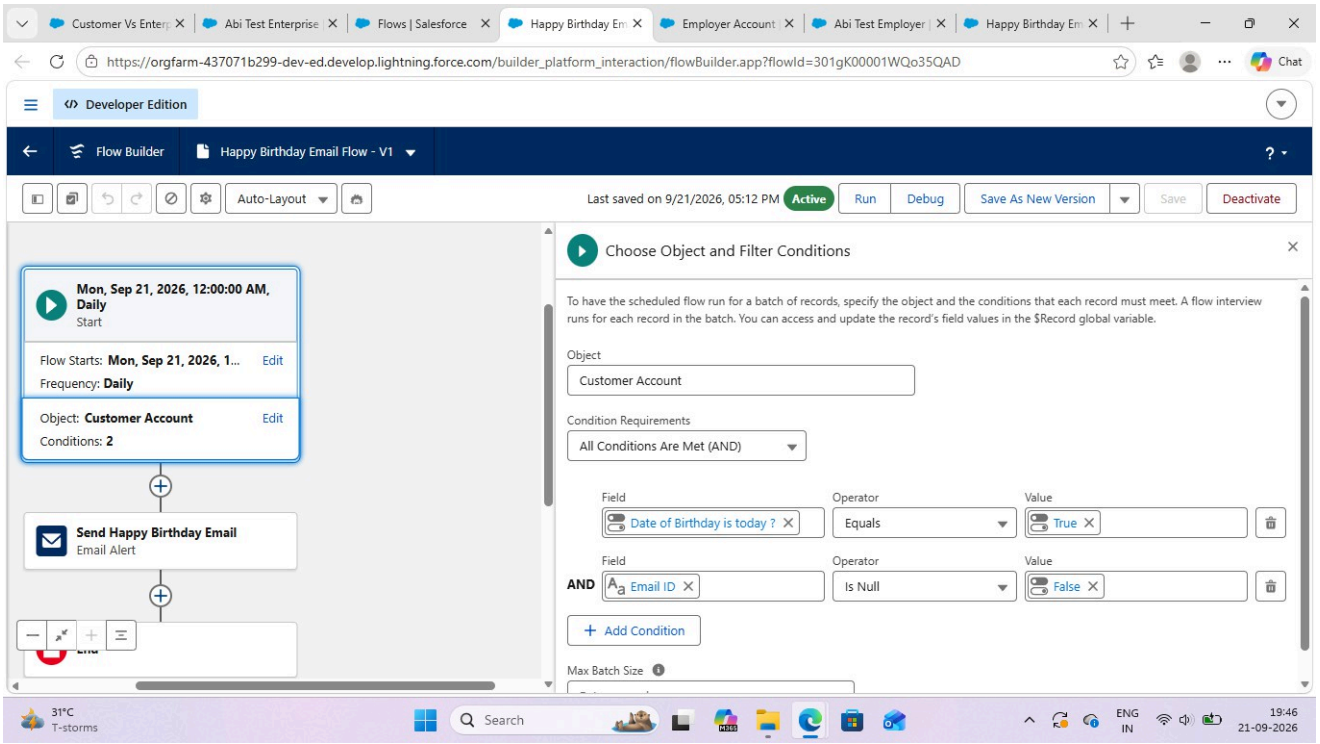

Figure 35. Dashboard & Final Analytics – Salesforce implementation evidence.

40. Conclusion, Advantages & Future Enhancements

The TheChaiShop&Co; CRM application brings together structured account management, standardized fields, validation, record types, automated billing calculations, birthday email automation, reports and dashboards within Salesforce. The implementation evidence demonstrates the configuration and testing carried out across the project's major milestones.

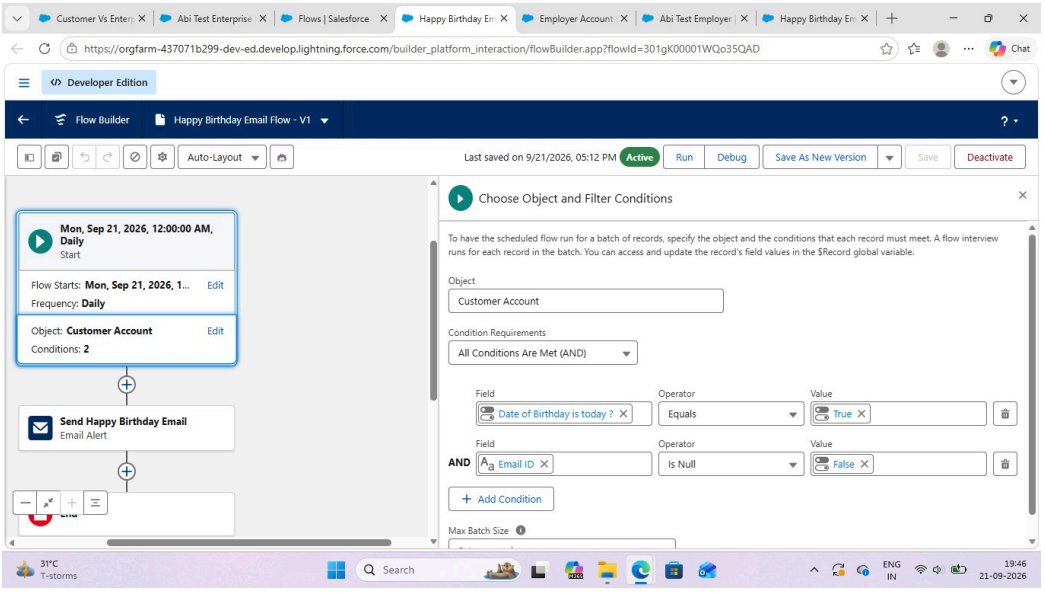

Advantages

- Centralized customer, employer and enterprise information.
- Reduced repetitive manual work through automation.
- Improved data accuracy through validation rules.
- Automated customer engagement through birthday email notifications.
- Reports and dashboards support sales monitoring and analysis.

Future Enhancements

- Mobile CRM support.
- AI-based sales prediction.
- WhatsApp/SMS integration.
- Inventory management.
- Multi-branch support.
- Advanced customer profiling.

Final Project Evidence

Final evidence screenshot from the Salesforce project workflow.

— END OF FINAL PROJECT REPORT —
